Greetings to the Open edX community & welcome to Cape Town!

This year marks an important evolution of the Open edX conference. While the Open edX project and platform have had global participation and reach, this is the first time we have hosted the conference outside of North America and Europe. While our platform strives to make education accessible to everyone, everywhere, the conference wasn't as accessible to some members of our community as it might have been. It's time to fix that.

Cape Town was an obvious choice given the vibrant EdTech ecosystem here including long-standing members of our community 2U and Construct Education. However, planning a conference half-way around the world is not easy and we could not have done it without the encouragement and support of Construct Education.

The past year has been one of great change and opportunity for our project. By the time we convene in Cape Town, the 18th edition of the Open edX platform, Redwood, will be released. This release is special because it represents the first time that we trialed an end-to-end, community led process for planning, executing and delivering a release. We are, of course, a community of learning so we will continue to learn and improve for the Sumac release and beyond.

This year has also been marked by some turmoil. Founding community members, 2U – the parent company of edX –, faced some strong headwinds and reduced their contributions to maintenance of the platform. It's no surprise to me that our vibrant Do-ocratic community stepped forward to ensure the work continues to get done.

We will face still more challenges in the coming year, I'm sure each of you has some in mind, but it gives me great confidence that we'll face them together.

I would like to extend the warmest thanks to everyone who helped make this conference happen: Construct Education, Wesgro, University of Stellenbosch, all of our sponsors, and the super star organizing team.

My Best,

Ed Zarecor | Chair of the Open edX Technical Oversight Committee
