

One series per \pstart with reledmac

Abstract

This file provides examples of features that allow one series of notes by `\pstart...pend`, when typesetting parallel pages.

We suppose there is no more than five `\pstart...pend` by page. The series A, B, C, D and E are for left pages, while the series F, G, H, I, J are for right notes.

In the left page

Instead of using `\Afootnote`, `\Bfootnote` etc., we use `\mynote`, which we let equal to `\Afootnote` at the first `\pstart`, `\Bfootnote` at the second `\pstart`, `\Cfootnote` at the third, `\Dfootnote` at the fourth, `\Efootnote` at the fifth, and we restart at `\Afootnote` at the sixth `\pstart`.

To do that, we increment the counter `mynotelevel` at every `\pstart` and reset it to 1 when it becomes equal to 6.

In the right page

We do the same thing, but use the `mynotelevelR` counter, rotating its values between 6 and 10, and, consequently, rotating between F, G, H, I, J series.

Series position

We use `\seriesatend` to ensure that a `\pstart` series between two pages will be printed on the first page at the end of the series, but on the second page at the beginning of the series. However, we need to do this when the `\pstarts` are printed, not when they are called. So we use:

`\AtEveryPstartCall` to set the footnote series.

`\AtEveryPstart` to set the footnote position.
