

- Advanced search headings (i.e. 'Filters', 'Specify map area', etc.) have a smaller font size.
- Font sizes in general should be made consistent and probably 1 or 2 pts smaller
- We now use 4 columns instead of 3
- Filters can be added one at a time
- Mobile design can be basically the same as it already is (i.e. stacked design)

Ideally these changes will mean the expanded panel isn't too large. It would be good to try to have the default behaviour that the panel doesn't disappear, so that one can do searches and see the results without going back and forth.

@Mufeng - If you have already included a search button somewhere else (maybe next to the quick search bar) you can just use that, it doesn't need to be where it is here.
