When I add an association from a common class to one that is a Interface Ball, the second one disappears. If I exchange the To class to the From class the Interface Ball doesn't disappear. Now, in both cases described above, if the Navigable of the Association End on the Interface Ball side is True and on the other side is Unspecified, an arrow should appear pointing towards the Interface Ball, but it doesn't.

Dear Gabriel Gatti,

Thank you for reaching out to us. I have forwarded the details to our engineering team for further investigation. I will keep you updated on any progress and appreciate your patience in this matter. If you have any additional questions or concerns, please don't hesitate to contact me. Have a great day!

Best regards,
Rain Wong
