★ Projects

React App (Gif Finder)

Simple web app, it provides a full bank of gif to search, It consumes the giphy API.

omi-gifs.netlify.app/

IoT Monitoring Solution

Monitoring physical variables using heat and current flow sensors within a micro controller, Consist on read data from the sensors and send it from a desktop client app to the server side and store it on a db to display them on fancy google charts.

Post Management Web App

April 2023

Developed a full-stack web application using Angular for the frontend, Express and Node.js for the backend, and MySQL for database management. The app includes user authentication with JWT. Authenticated users can create, view, and manage posts, which are displayed on a centralized homepage accessible to all logged-in users. This project demonstrates a robust implementation of user sessions, content management, and secure data handling.
