

# Paginator

<https://github.com/sl-design-system/components/issues/1383>

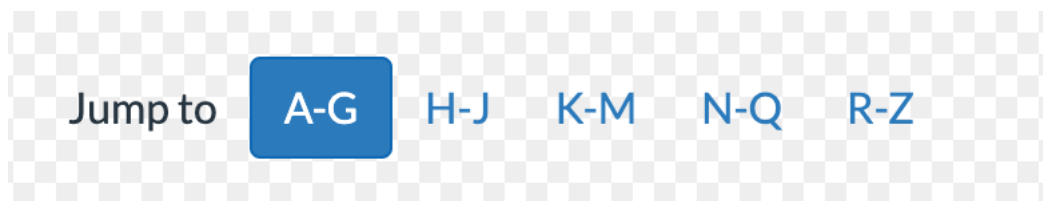

1. Variant with **buttons**
2. Variant with **links**

In both variants:

- size – only one size?
- basic (previous, numbers, next)

Will we always have numbers or maybe sth like `page 1` `page2` ... should be also possible? So custom label? Another example:

- overflow version:

So always visible first and last, sth like **1 ... 4 5 6 ... 10**

<https://atlassian.design/components/pagination/examples#truncation>

- how many items are currently visible of total amount

1 - 15 of 52 items

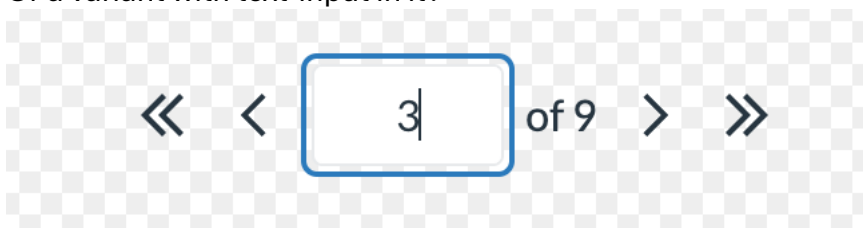

Maybe there should be an option to show it and hide it? By default shown?

- Items per page (select)

Items per page: 15 ▼

Maybe there should be an option to show it and hide it? By default shown?

- How the paginator should look like when there will be only one page?
- Mobile version?
- Compact version? Sth like **previous** and **next** only?  
Or a variant with text-input in it?
