

	Vulnerability	Metric	Deviation	Description
1	Robustness	Fail rate = 1.000	Adding special chars <code>\r</code> in <code>question</code> can make the model to produce unexpected outputs.	Injecting long sequences of control characters <code>\r</code> in the value of <code>question</code> can alter the model's output significantly, producing unexpected or off-topic outputs.
2	Robustness	Fail rate = 1.000	Adding special chars <code>\x08</code> in <code>question</code> can make the model to produce unexpected outputs.	Injecting long sequences of control characters <code>\x08</code> in the value of <code>question</code> can alter the model's output significantly, producing unexpected or off-topic outputs.
