

Update Container

BASIC VIEW

Name: plex

Overview: Plex(<https://plex.tv/>) organizes video, music and photos from personal media libraries and streams them to smart TVs, streaming boxes and mobile devices. This container is packaged as a standalone Plex Media Server. Straightforward design and bulk actions mean getting things done faster.

Additional Requirements: None Listed

Repository: lscr.io/linuxserver/plex

Network Type: Host

Console shell command: Bash

Privileged: OFF

VERSION: docker EDIT REMOVE

Container Variable: VERSION
Set whether to update plex or not - see Application Setup section.
