

## 1. Clone the repository in IntelliJ

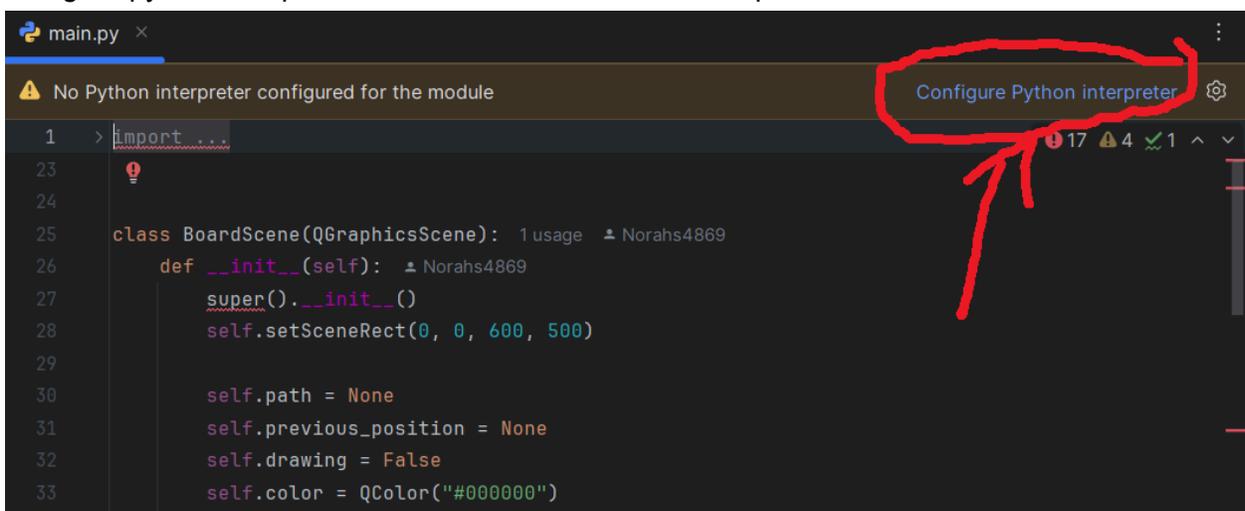

## 2. Choose where to save the cloned repo.

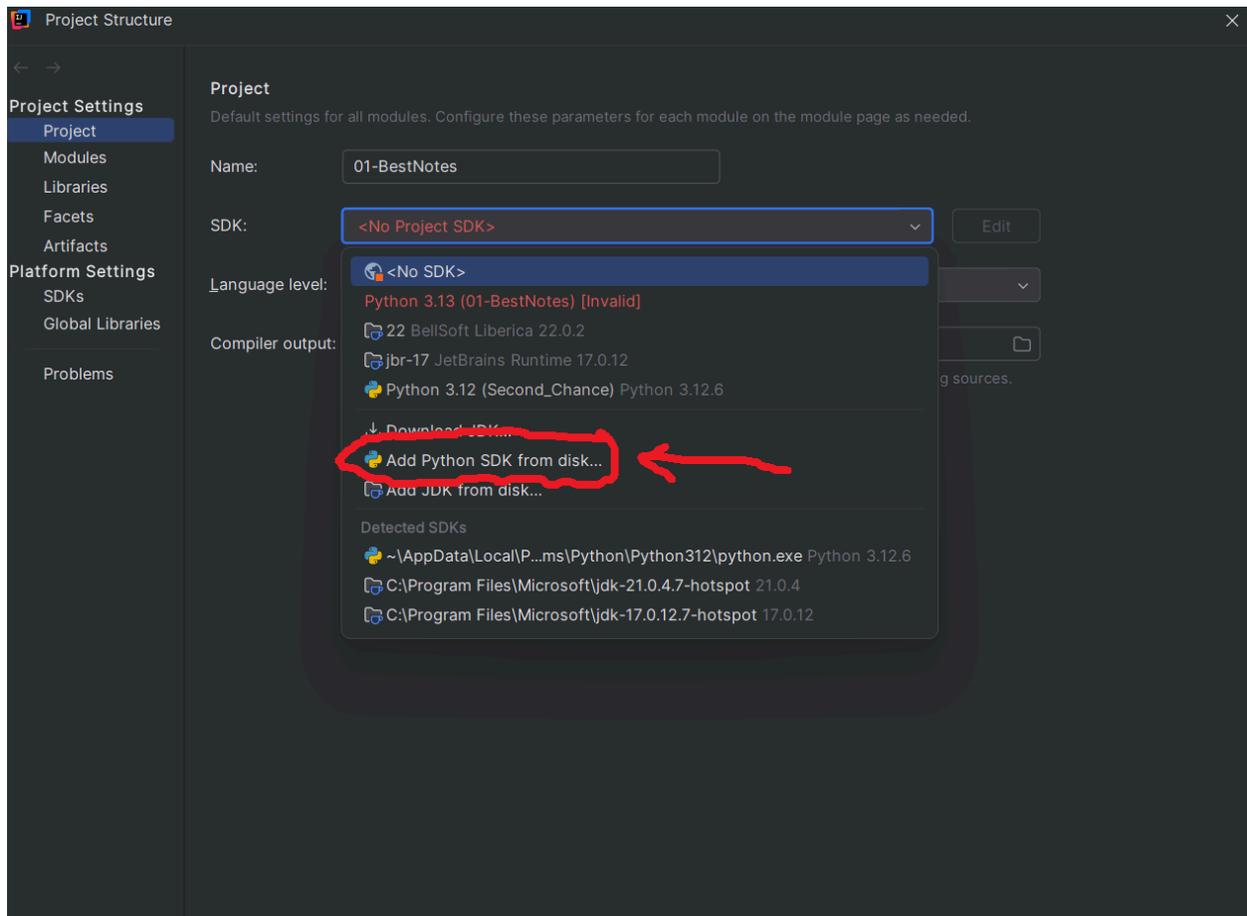

3. Ensure that you have python plugin installed.

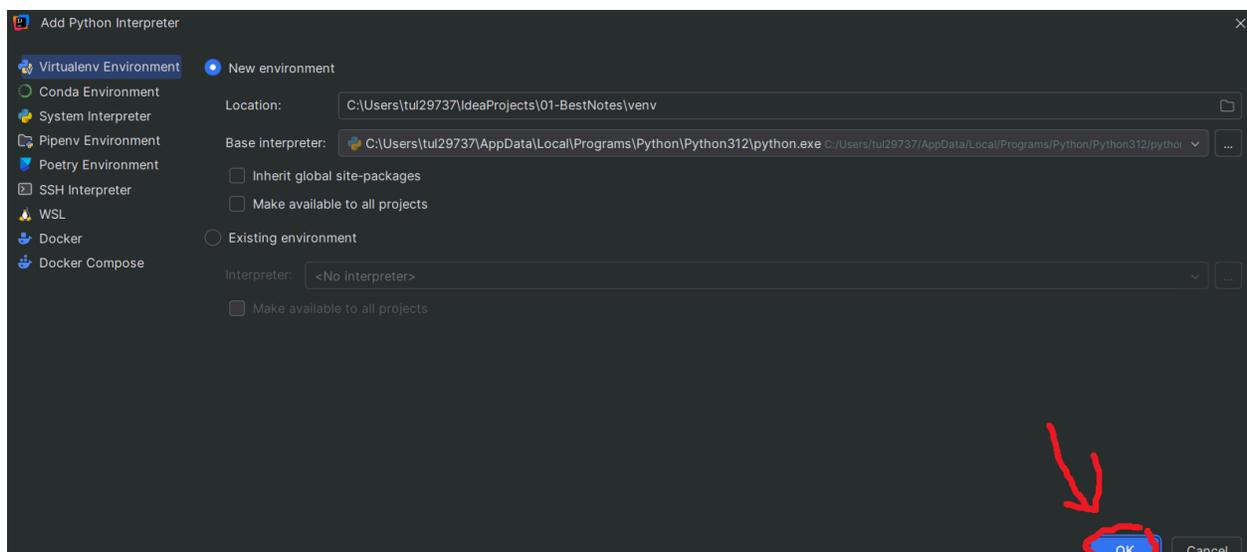

4. When you try to run main.py, it will give a warning about a missing translator. So, click configure python interpreter and then add a new local interpreter.

## 5. Add a Python SDK from disk.

## 6. Then on the left bar make sure that Virtualenv Environment is selected. Inside the Virtualenv Environment menu create a new environment and click ok.

7. Open command prompt and cd IdeaProjects\BestNotes (or wherever you save the repository). Afterwards type in the command: venv\Scripts\activate

```
C:\Users\tul29737>cd C:\Users\tul29737\IdeaProjects\01-BestNotes
C:\Users\tul29737\IdeaProjects\01-BestNotes>venv\Scripts\activate
```

8. Next, install pyside6 with the command: pip install pyside6 AND pip install python-vlc

```
(venv) C:\Users\tul29737\IdeaProjects\01-BestNotes>pip install pyside6

[notice] A new release of pip is available: 23.2.1 -> 24.3.1
[notice] To update, run: python.exe -m pip install --upgrade pip
```

9. After it's installed, you can exit the command prompt and go back to IntelliJ. Finally, run main.py and the application should pop up.
