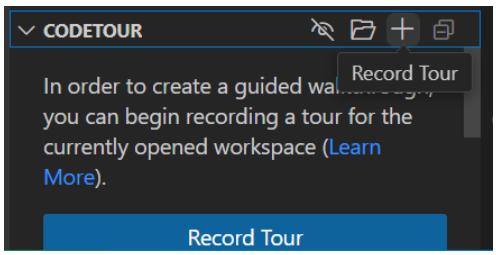
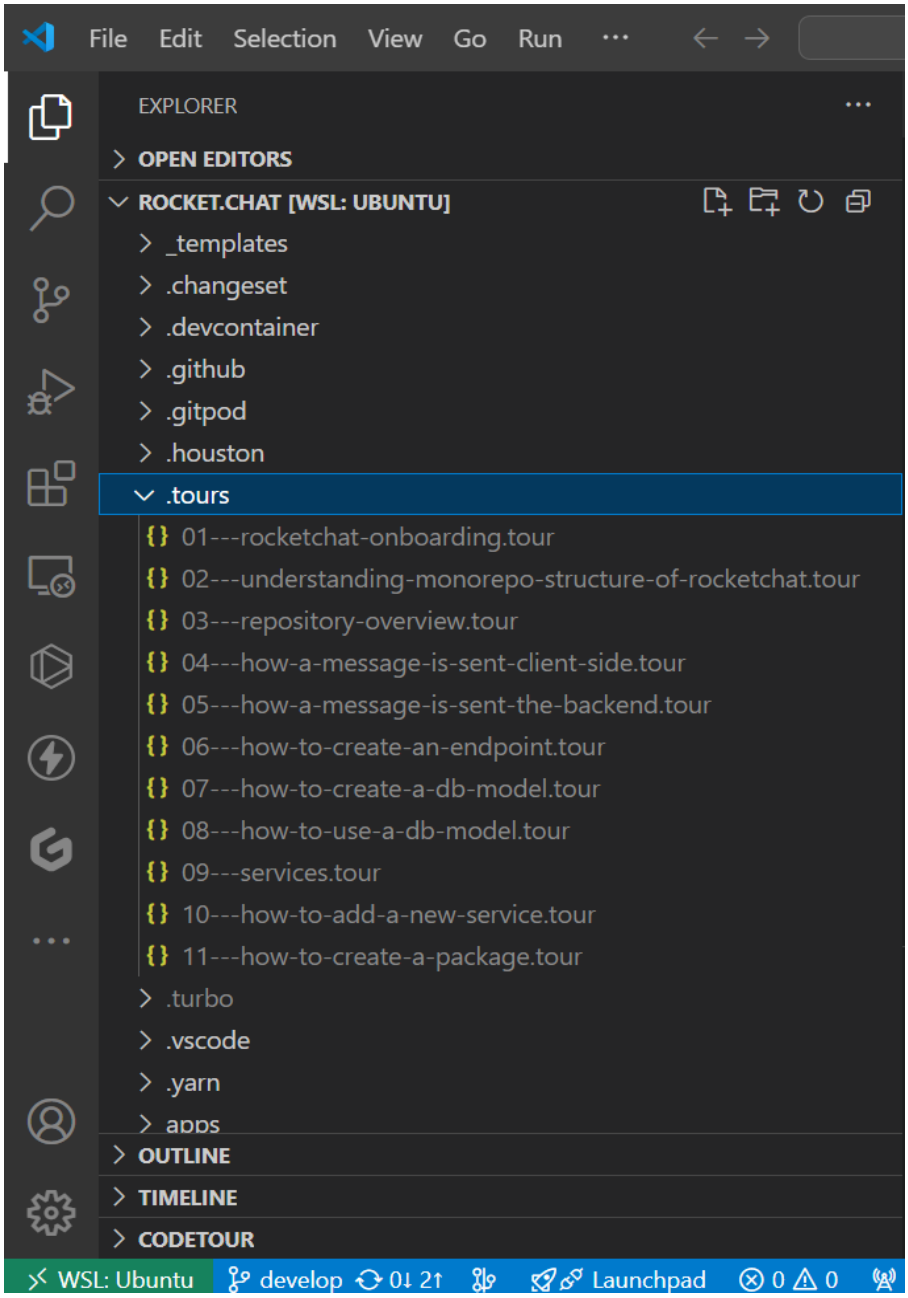
Step 1: Create Tour using UI provided by Code Tour extension
Clink on the '+' icon



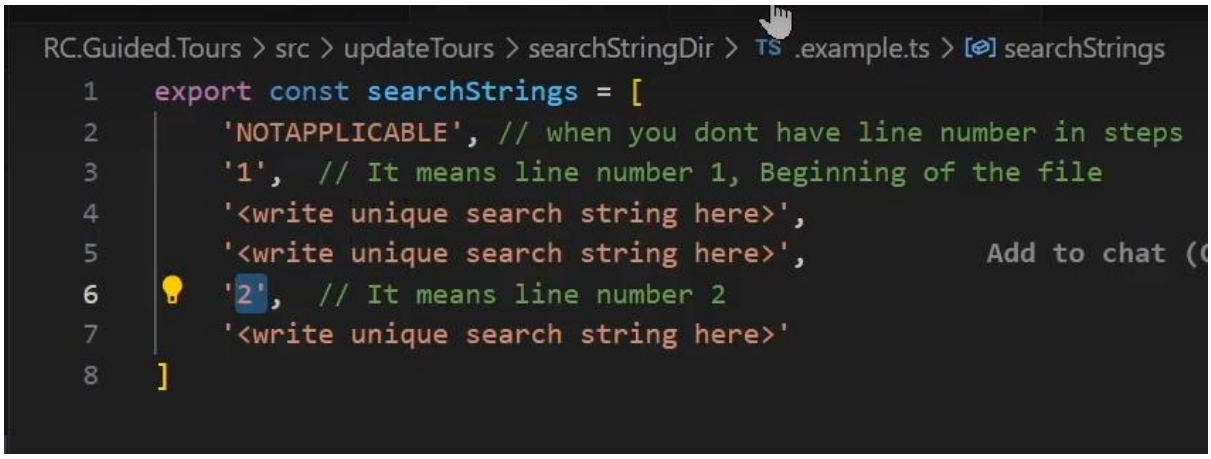
After you finished recording a tour you can see a new '**.tour**' file will we created in '**.tours**' folder:



Step 2: Now create a New '**.ts**' File in '**src/updateTours/searchStringDir/**' folder, and the filename of .ts file and filename of .tour file should be same:

Example: if filename of .tour file is *04---how-a-message-is-sent-client-side.tour* then filename of .ts file should be *04---how-a-message-is-sent-client-side.ts*

Now inside of this .ts file we will have to write down the search strings in for every step, the format of this file is given in .example.ts file:



Step 3: run the following command on terminal in case of code is changed in rocket chat and tours are not pointing at exact line

Command : **npm run update**
