the opportunity

# Food delivery is a \$150B industry in the UK

The UK food delivery market is set to reach **£3.8 billion by 2024**, with a compound annual growth rate (CAGR) of 15.2% forecasted over the next five years.

The overall market volume is expected to reach **£63.75 billion by 2029** [1].

the opportunity

# Gen Z and Millennials Driving Growth

---

**63%**

aged 18–35 have used a food delivery app in the past 90 days

**4.5 + orders**

per month

**80%**

via apps

the gap

**Even with all these apps,  
people still have hard time  
when they order food...**

Uber Eats

the problem

# Food Delivery is Broken.

Ordering food should be simple. But today, it's tiring, overwhelming, and expensive.

- Endless app hopping (Uber Eats, Just Eat, Deliveroo...)
- Manual price comparing
- Decision fatigue: "I don't know what I want to eat..."

the vision

**What if  
ordering food  
was as easy as  
saying 'I'm  
hungry'?**

---

Target Users

# Who are we helping?

## Busy Professionals

No time to cook and think at what to eat

## Deal hunters

Want to save money across apps

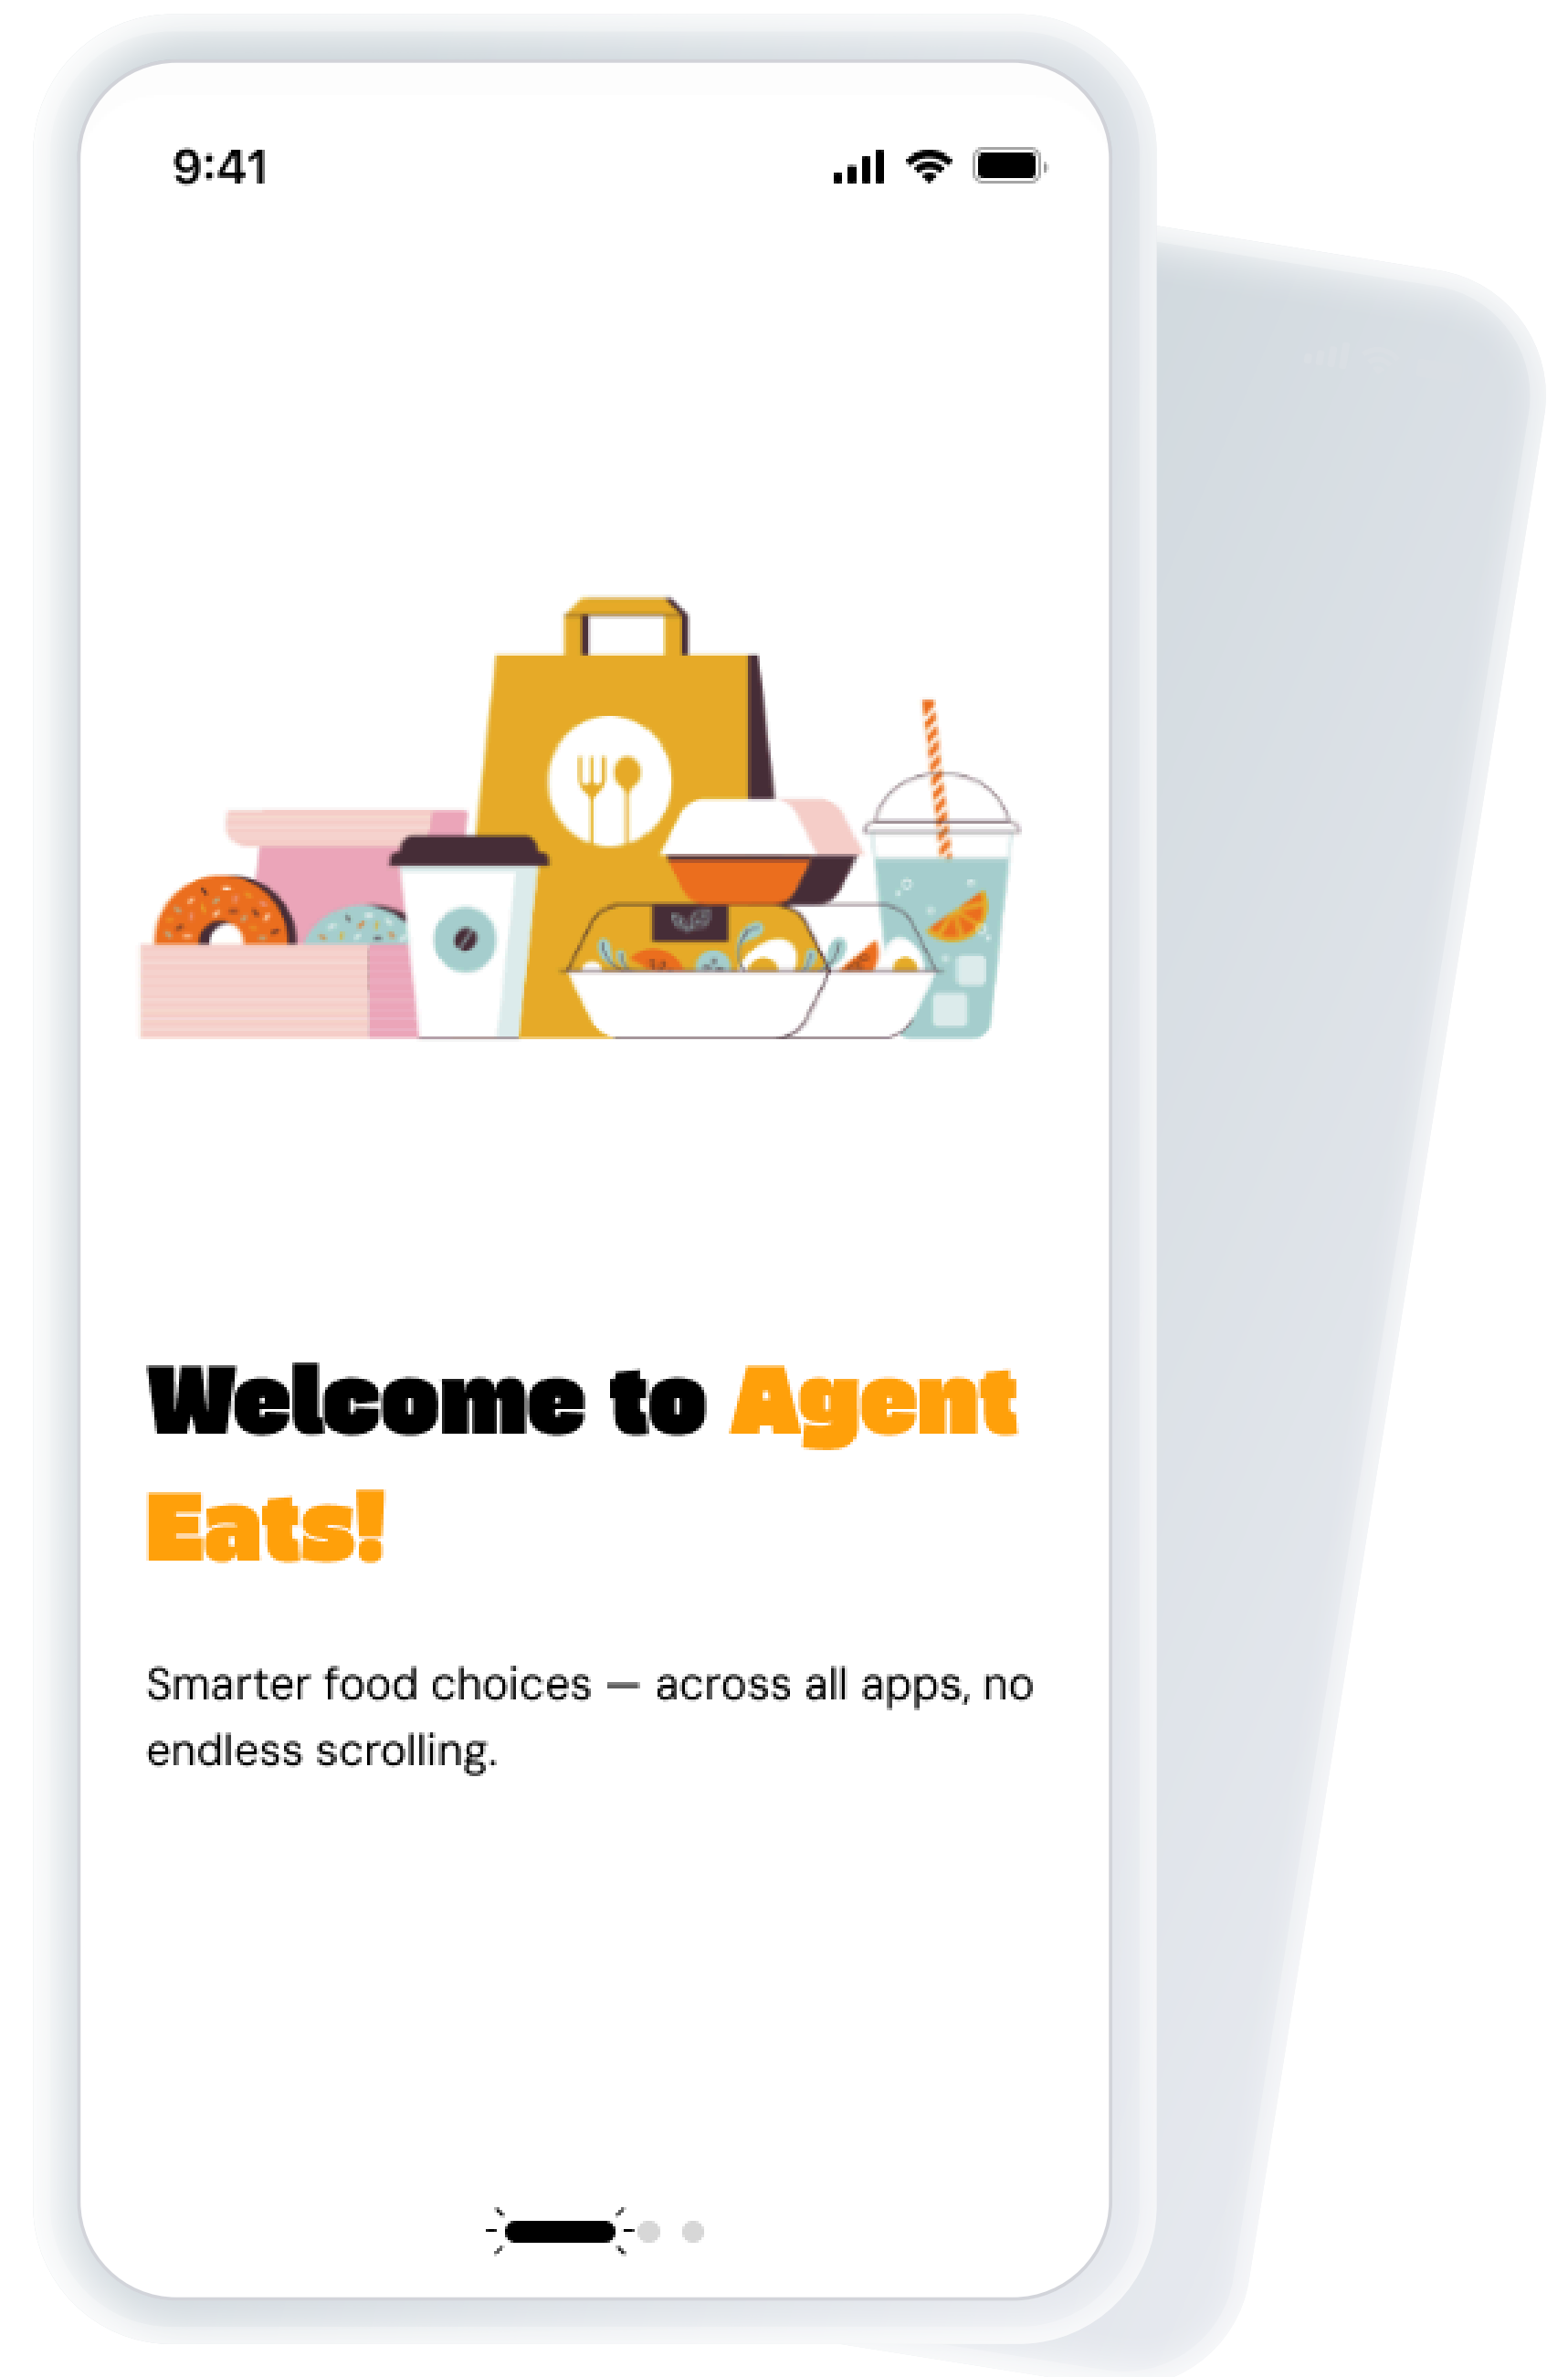

## Decision-fatigued users

"Just tell me what to eat!"

Our Solution

# Meet Agent Eats.

A personal, intelligent, cross-platform layer that helps people stop overthinking food — and just eat better.

# Core Features

01

## Understands Users Like a Real Assistant

- Adapts to vague input like “something warm and filling”
- Builds a long-term taste profile to personalize future orders

03

## Smarter, Multi-Factor Meal Search

- Compares across apps using price, delivery time, reviews, and promotions.
- Surfaces best-value meals, not just popular ones

02

## Always Learning With Every Order

- Grows smarter based on your feedback.
- Future recommendations are faster and more relevant

04

## Cross-Platform From Day One

- MVP supports Uber Eats, Just Eat, and Deliveroo
- Doesn't make you switch where you already like to order

the future experience

# From indecision to delicious — fast and easy.

competitors

# How we are different

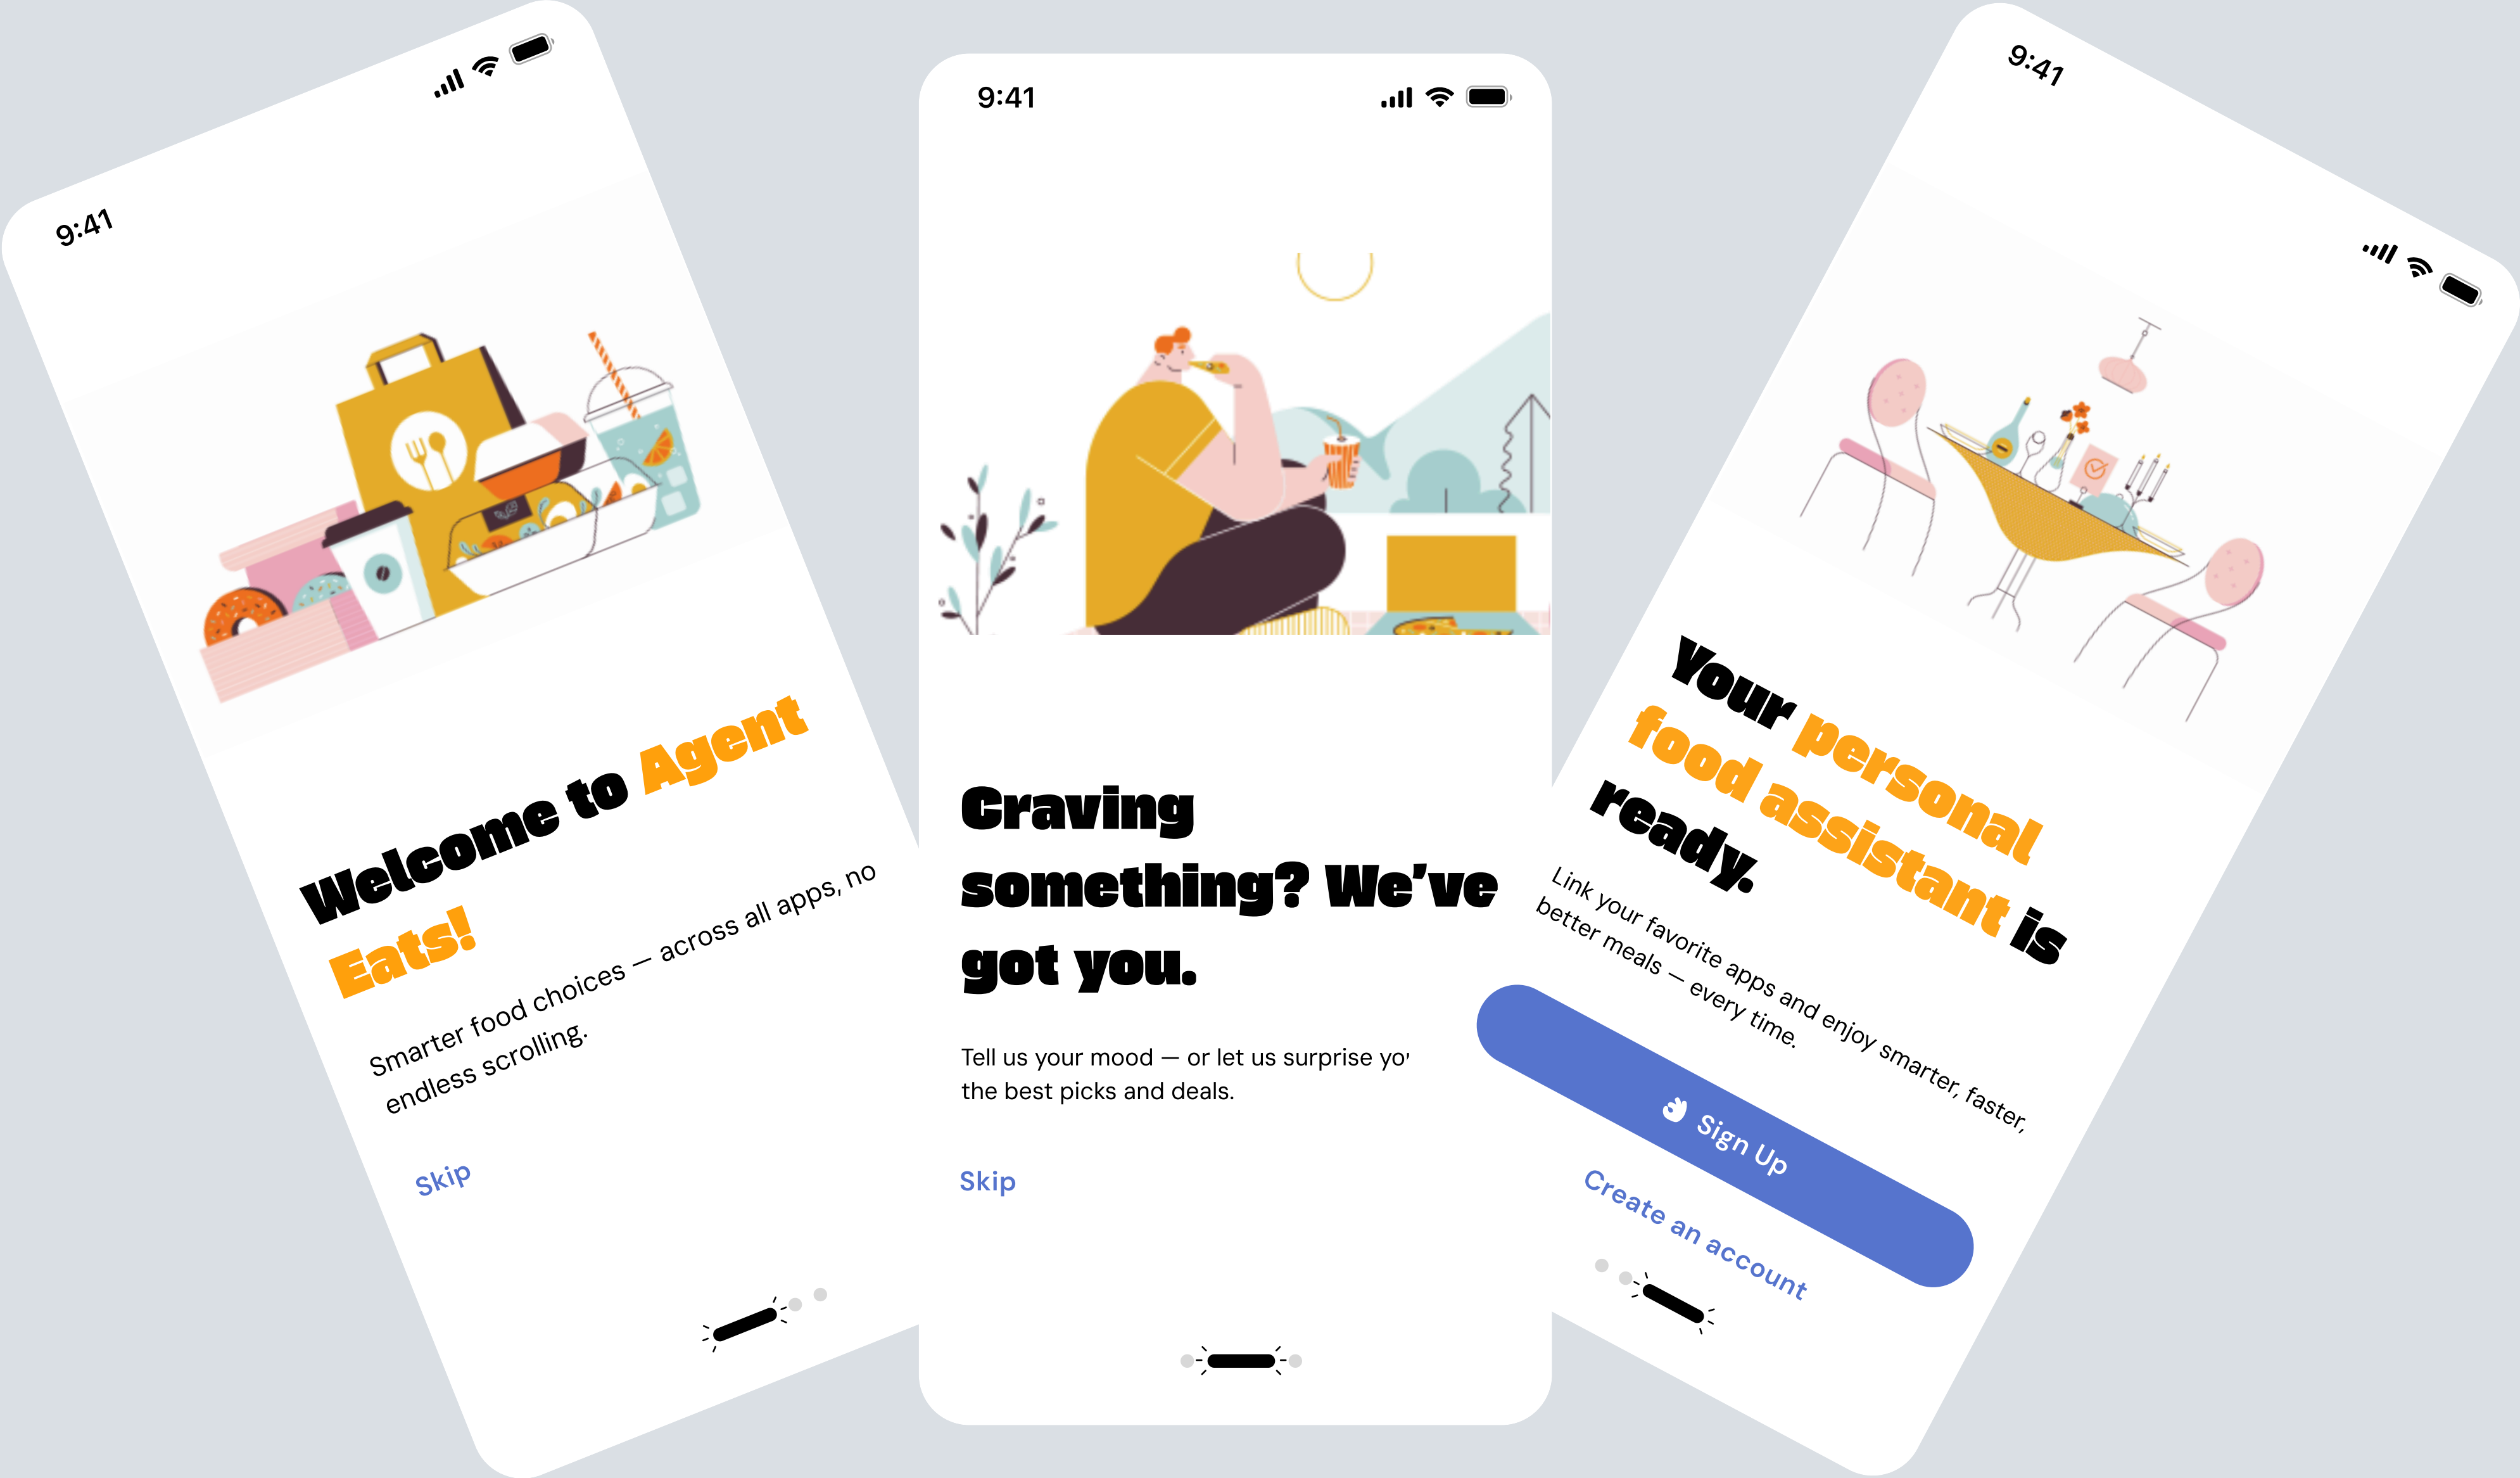

Feature / Product	Uber Eats / Deliveroo / Just Eat	DoorDash GPT Plugin	Agent Eats
Cross-platform search	✗ Single platform only	✗ Only works in Doordash	✓ Compares across apps
Smart meal recommendations	⚠ Basic suggestions	✓ GPT-powered	✓ Personalized via chat
Chat-based interaction	✗ Traditional UI	✓ GPT-powered	✓ Friendly, assistant-like chatbot
Decision support (budget, craving, mood)	✗ Not contextual	⚠ Partially	✓ Mood + budget-aware
Auto navigation + ordering	✓ Native only	✗ GPT can't order	⚠ Partial (auto-navigation + handoff)
Learns user preferences	✗ One-off suggestions	⚠ Limited memory	✓ Learns + evolves over time

# Product Walkthrough

A mobile-first web app

intro screens

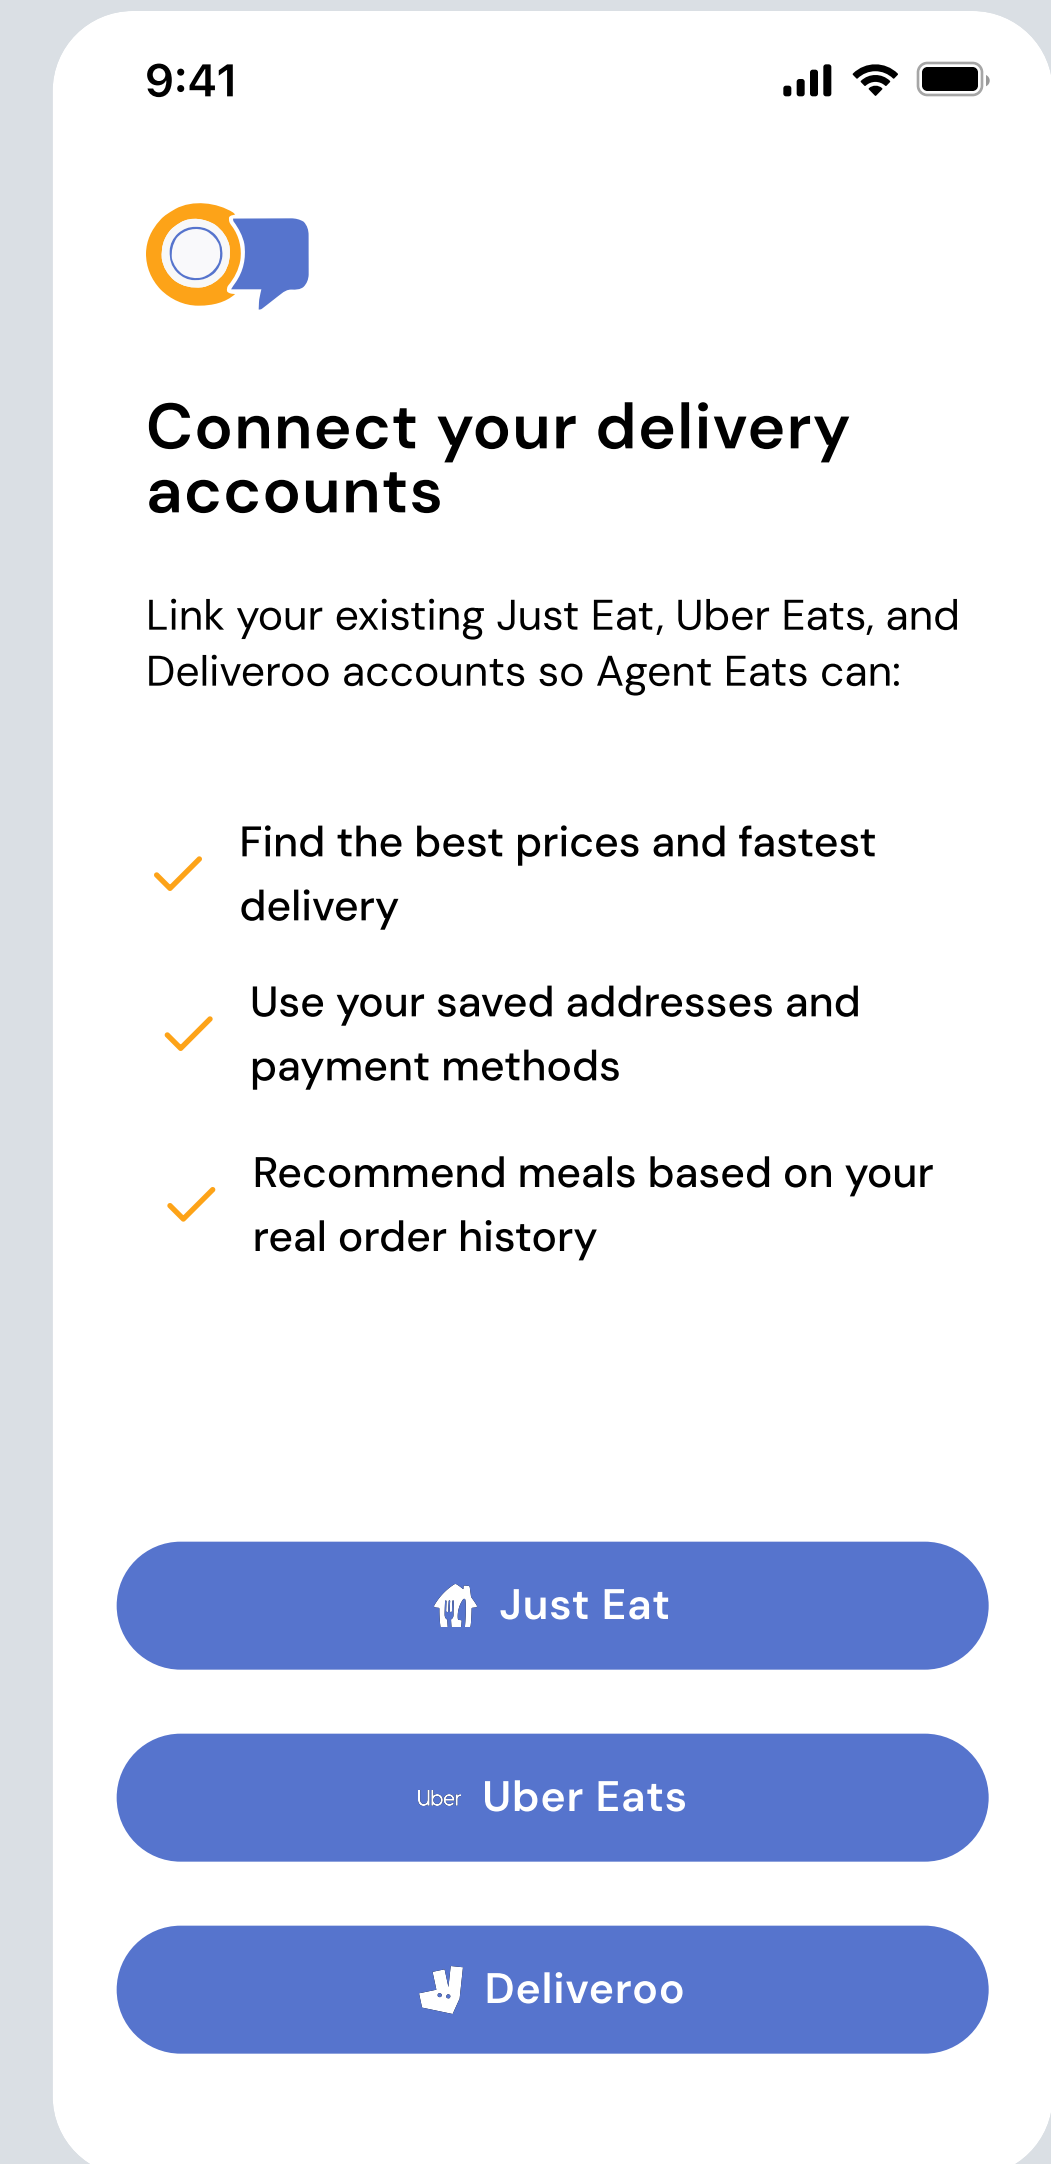

# Connect to existing food delivery platforms

To deliver personalized recommendations and compare across platforms, we ask users to connect their existing **Just Eat, Uber Eats, and Deliveroo** accounts.

*This allows Agent Eats to:*

- Use saved addresses and payment methods
- Access real order history
- Recommend faster, smarter, and more relevant meals

**It's a one-time setup — the key to a seamless food assistant experience.**

# Chatbot

understand user

What's your delivery address?  
Want to give it a name?

Next, let's talk food. 😊  
Any particular flavors you love?

[Spicy 🌶️] [Sweet] [Umami 🍲] [Surprise me]

Any cuisines you really enjoy?

[Chinese 🇨🇳] [Mexican 🌮] [Italian 🍝]  
[Japanese 🍣] [Others...]

Do you have any allergies I should be aware of?

Thanks. I'll make sure to avoid anything with peanuts. 🥜

Last thing — do you have a typical price range for meals?

[£10 or under] [£10–£20] [No limit] [Depends]

# Chatbot place an order

## 1. Understands user intent

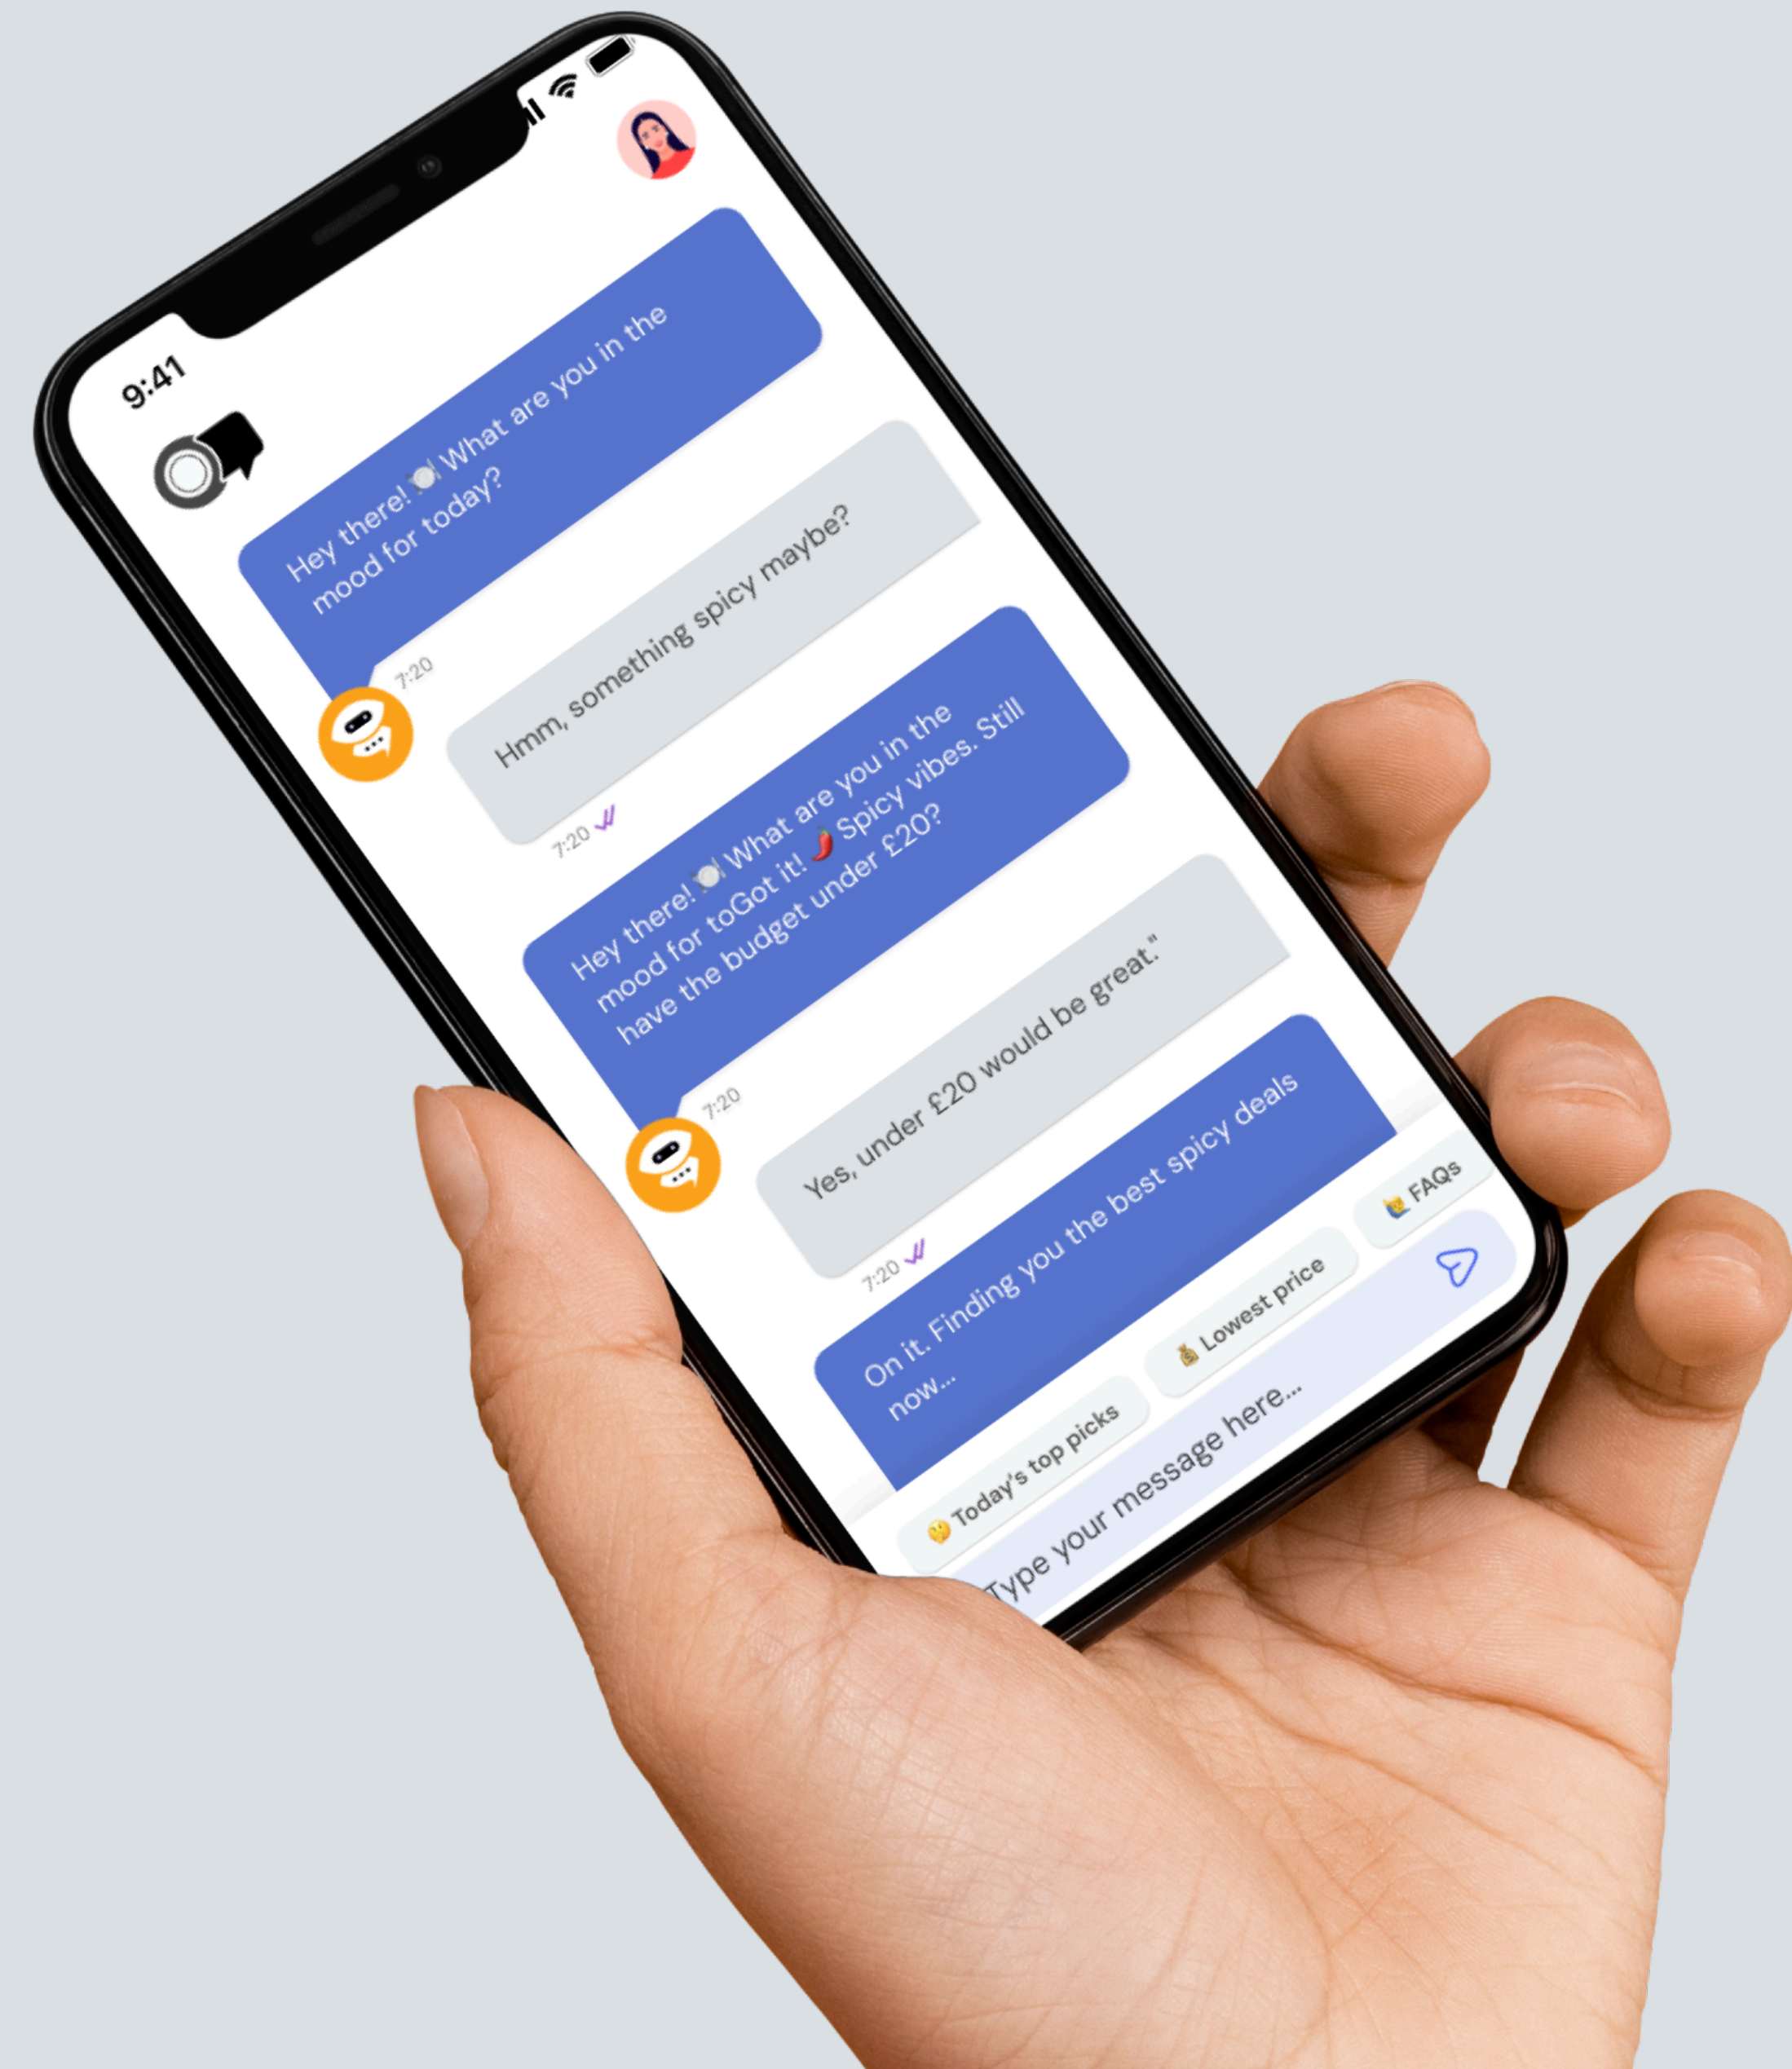

- Collects craving, budget, and dietary needs through friendly chat
- Smart defaults based on saved preferences

## 2. Finds the best option across platforms

- Compares price, delivery time, reviews, and promotions
- Recommends 1–3 curated meals for the user to choose

## 3. Confirms and prepares the order

- Uses saved delivery address and payment method
- User approves with one tap

# Agent

## place an order

---

What users see

**A friendly chatbot agent that keeps you in the loop.**

 "Placing your order with Wok & Go..."

 "Found the best delivery time — 25 minutes."

 "Applying a 10% discount code..."

 "Order confirmed! Your food will arrive around 12:45 PM."

 "I've saved this preference for next time."

Behind the scene

**your agent is hard at work.**

1. Launches the selected food app (Uber Eats, Deliveroo, etc.)
2. Searches for the chosen restaurant or menu keyword
3. Navigates to the right dish
4. Adds item to cart
5. Applies promo code (if available)
6. Uses saved address and payment
7. Confirms the order
8. Returns order status to user

# Demo

## USE CASE

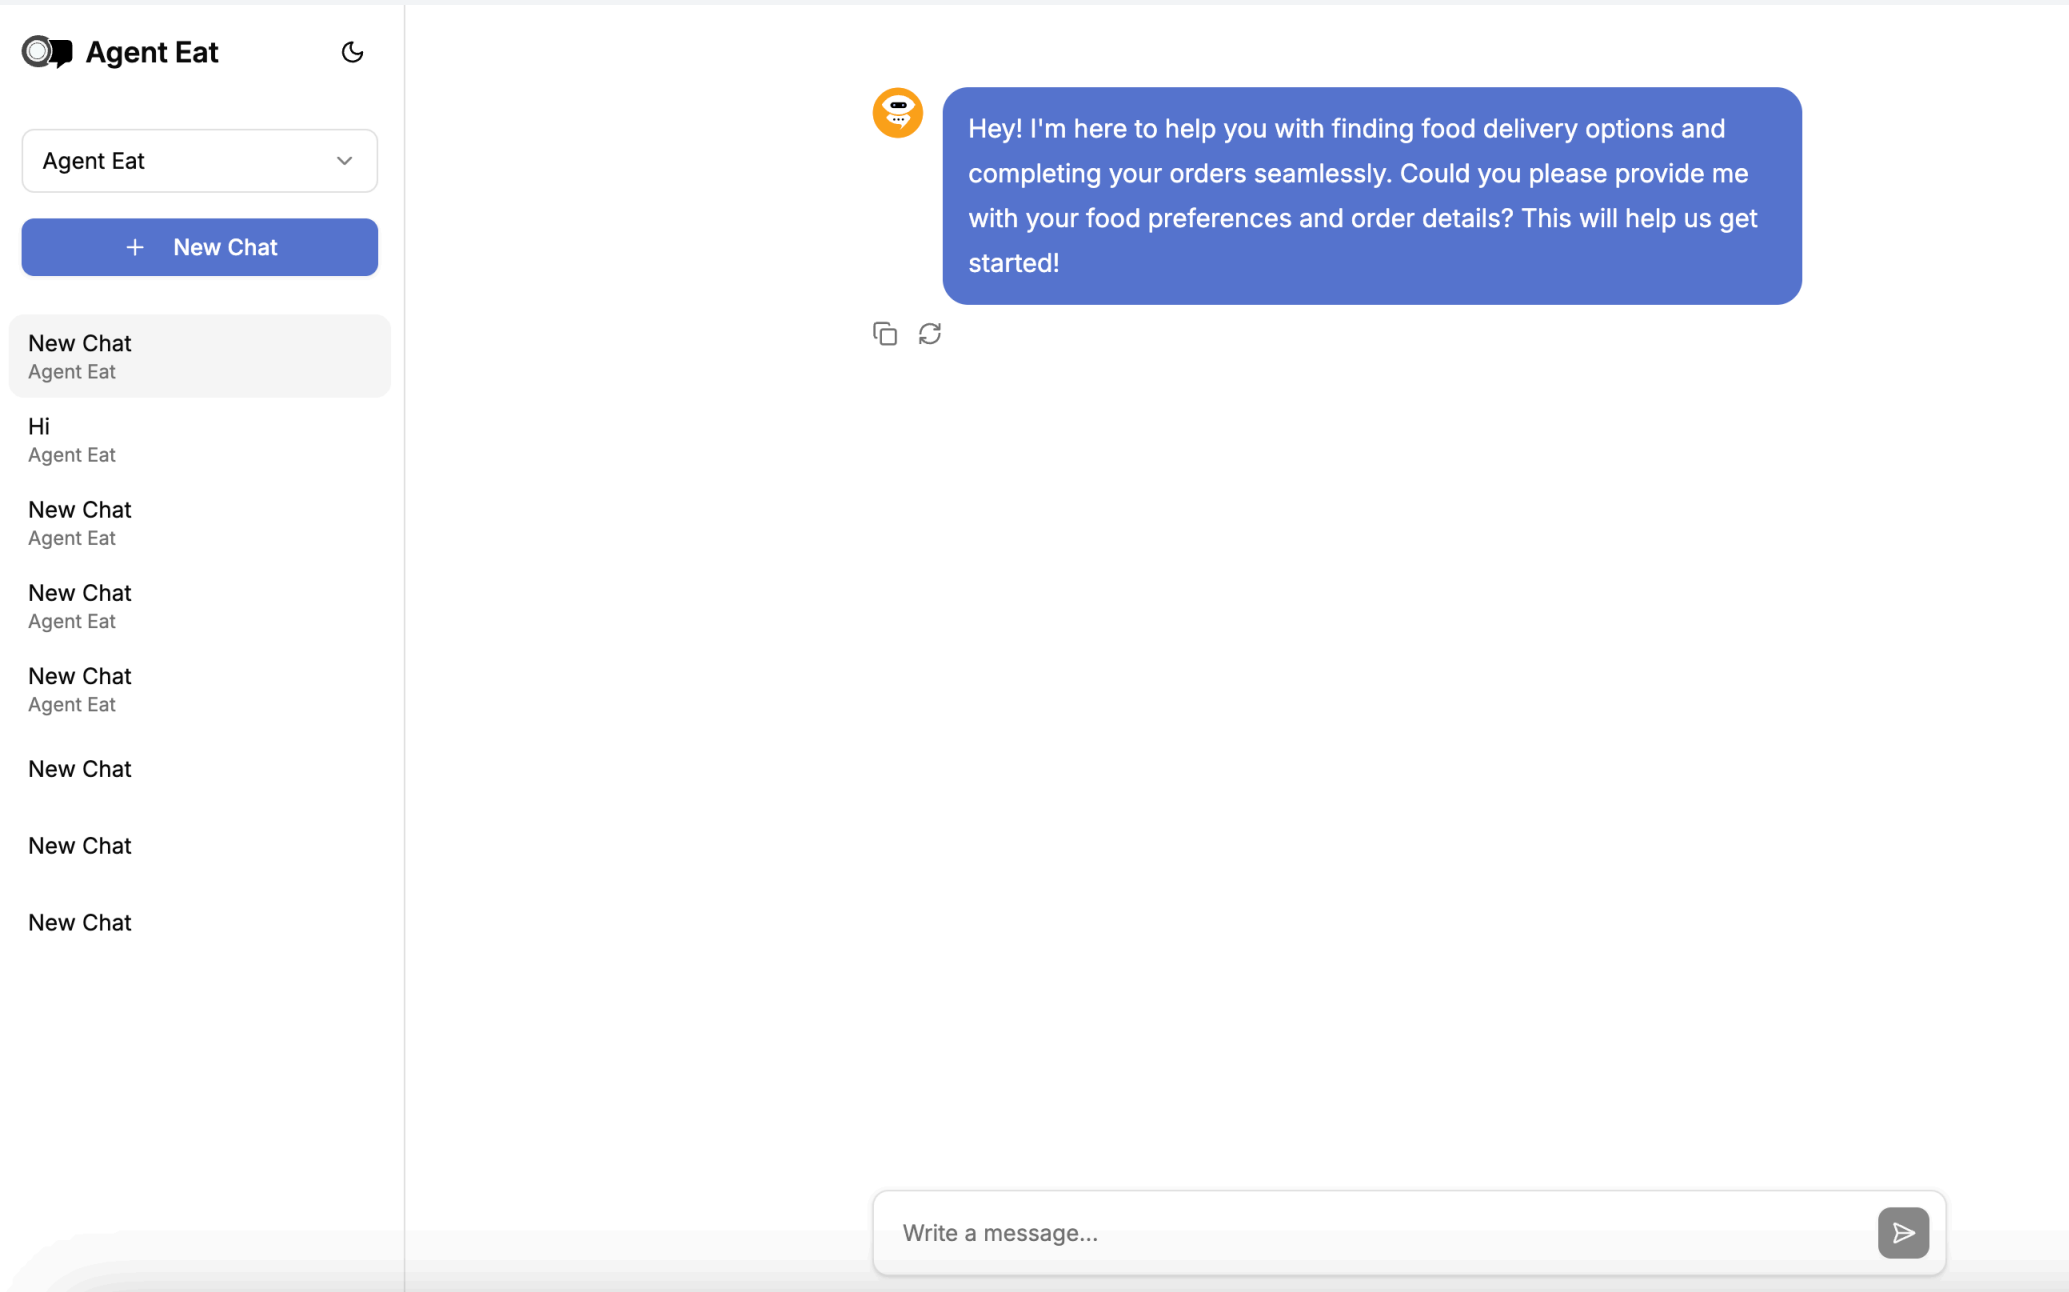

**User craves Chinese food → Agent recommends Kung Pao Chicken → Places order automatically**

- We focused on the core loop: onboarding → order the first dish → smart recommendation → payment
- Due to time constraints, our current prototype runs on desktop — but the real product is designed as a mobile web experience, optimized for on-the-go ordering.

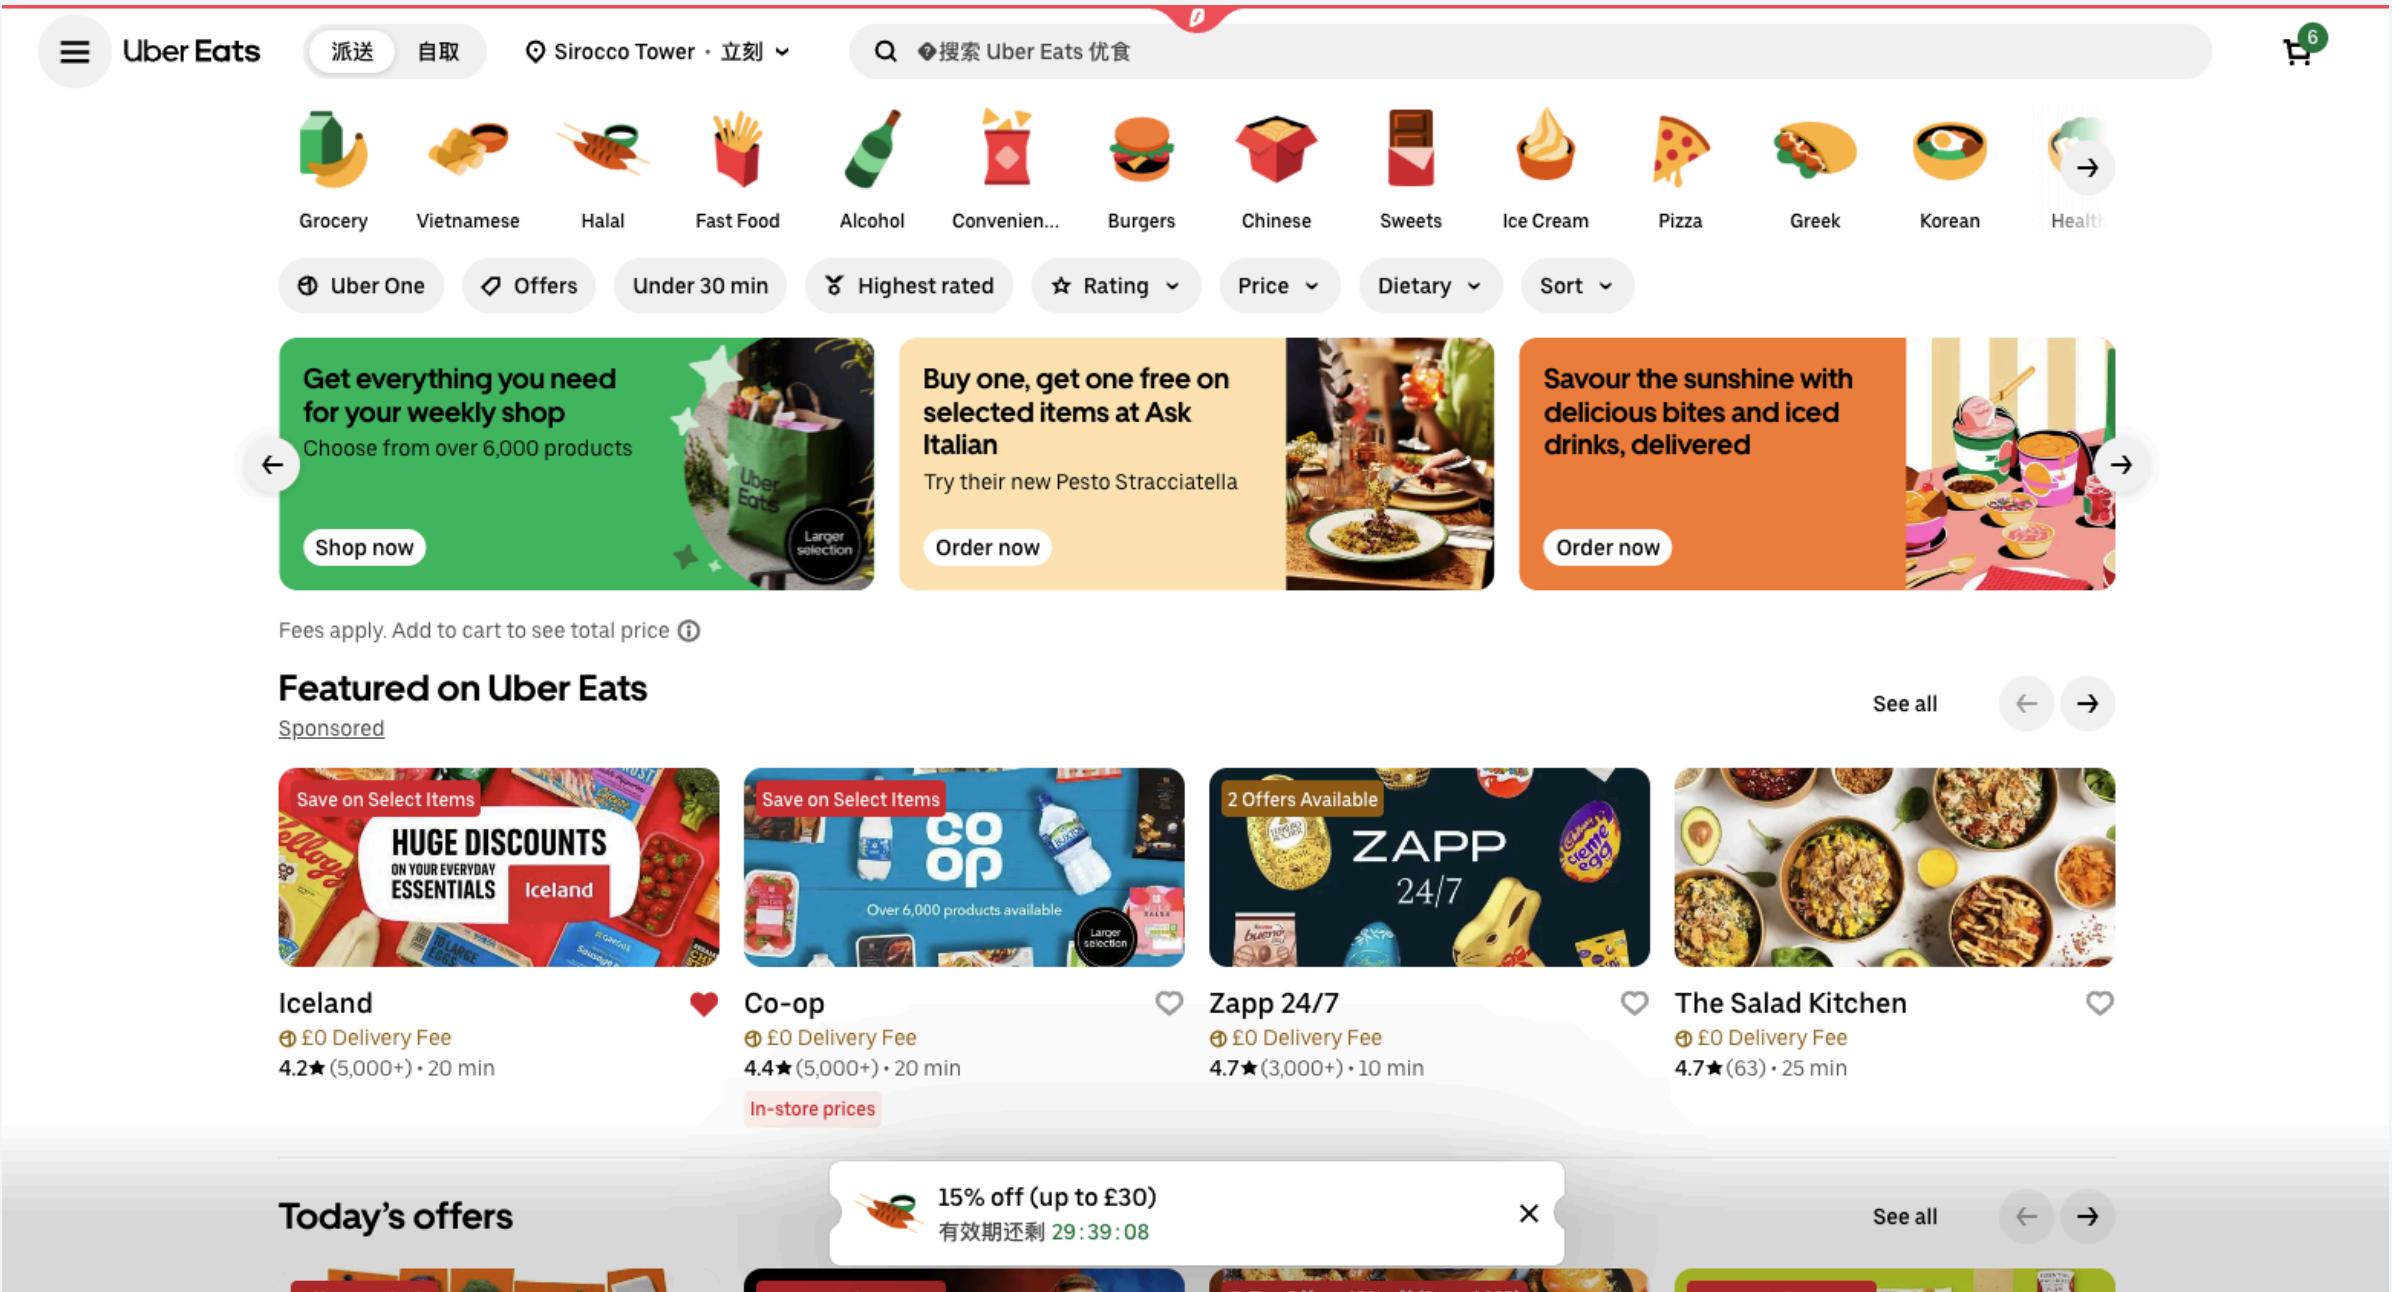

# Chatbot

Watch demo video

Chatbot

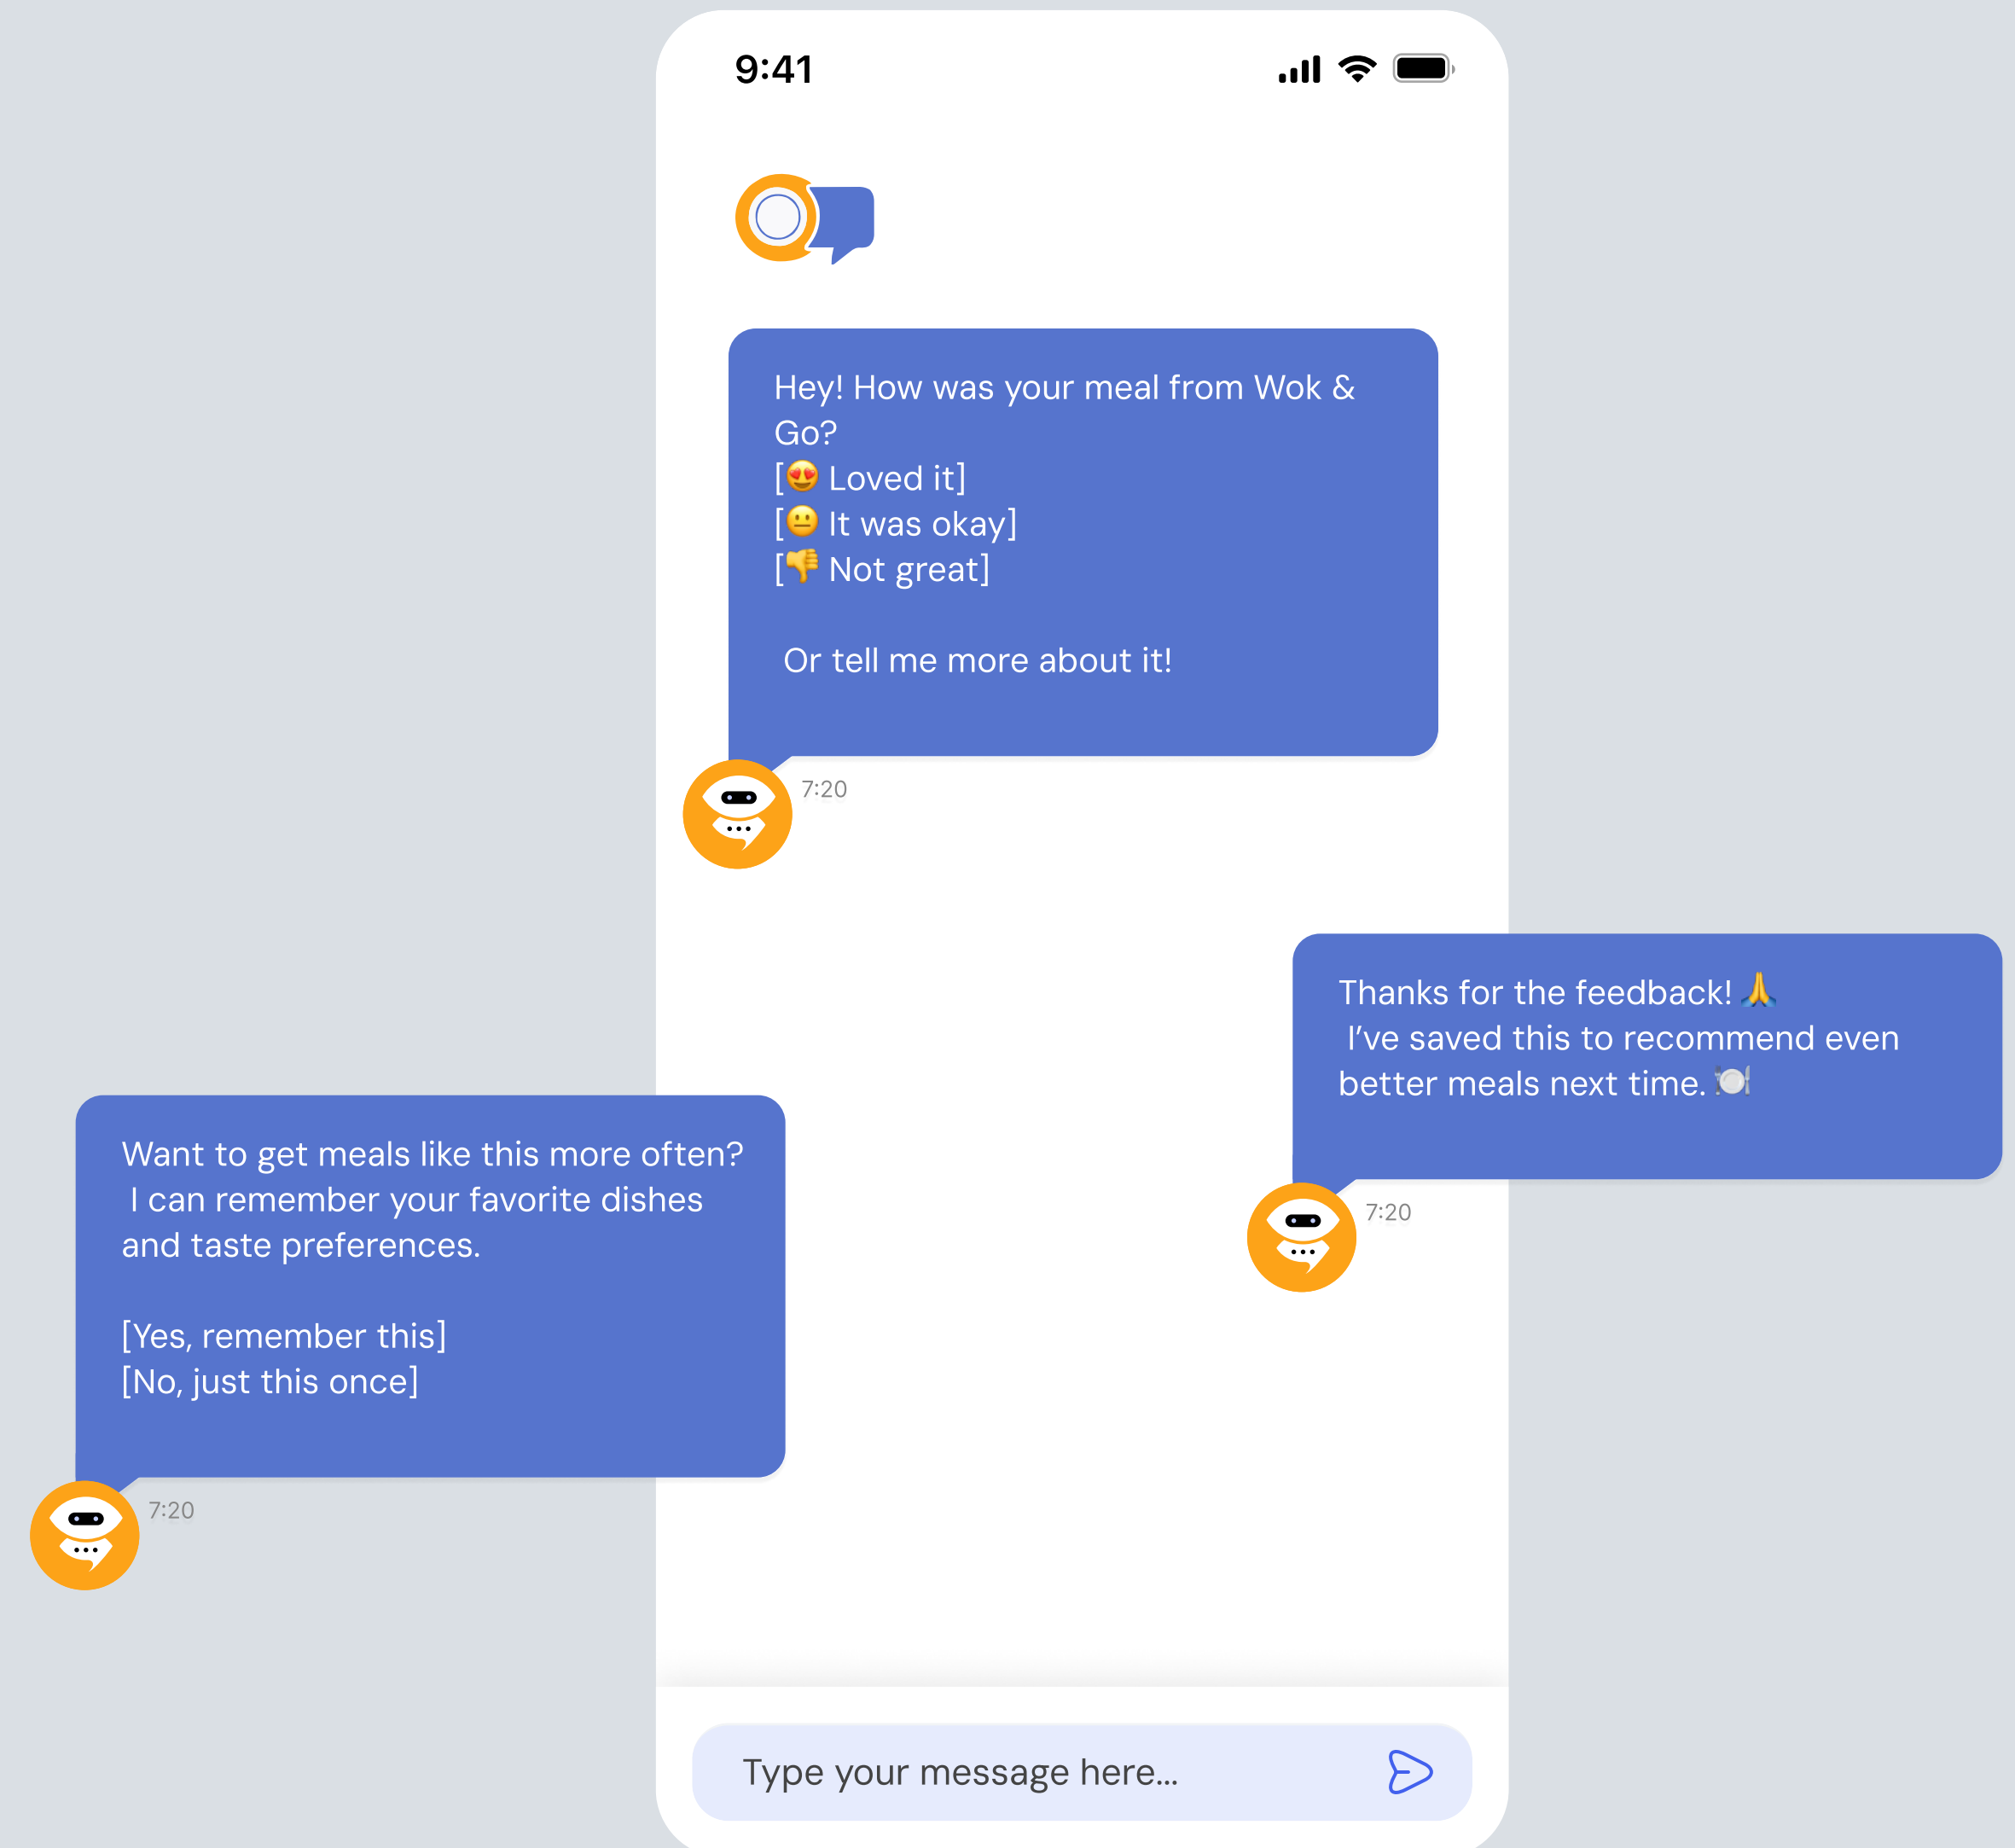

Behind the scene  
(no human interaction, everything is done by agent)

# Post-order

# Agent asks for feedback to become smarter

---

# Next steps

---

- 01** • Build a mobile app and enable all existing features
- 02** • Full API integrations for real-time ordering
- 03** • Integrate more delivery platforms globally
- 04** • Track real-time delivery updates inside AgentEats

## Summary

Ordering food shouldn't be a chore.  
With AgentEats, it's one simple conversation  
— and the perfect meal comes to you.
