```

```
az workload-orchestration target update --help
```

```
This command is from the following extension: workload-orchestration
```

Command

```
az workload-orchestration target update : Update a Target Resource.
```

Arguments

```
--no-wait : Do not wait for the long-running operation to
finish. Allowed values:
0, 1, f, false, n, no, t, true, y, yes.
```

Generic Update Arguments

```
--add : Add an object to a list of objects by specifying
a path and key value
pairs. Example: '--add property.listProperty
<key=value, string or
JSON string>`.
```

```
--force-string : When using 'set' or 'add', preserve string
literals instead of
attempting to convert to JSON. Allowed values:
0, 1, f, false, n, no,
t, true, y, yes.
```

```
--remove : Remove a property or an element from a list.
Example: '--remove
property.list <indexToRemove>` OR '--remove
propertyToRemove`.
```

```
--set : Update an object by specifying a property path
and value to set.
Example: '--set property1.property2=<value>`.
```

Properties Arguments

```
--capabilities : List of capabilities Support shorthand-syntax,
json-file and yaml-
file. Try "??" to show more.
```

```
--context-id : ArmId of Context.
```

```
--description : Description of target.
```

```
--display-name : Display name of target.
```

```
--hierarchy-level : Hierarchy Level.
```

```
--solution-scope : Scope of the target resource.
```

`--state` : State of resource. Allowed values: active, inactive.
`--target-specification` : Target spec Support shorthand-syntax, json-file and yaml-file. Try `"?"` to show more.

Resource Arguments

`--tags` : Resource tags. Support shorthand-syntax, json-file and yaml-file. Try `"?"` to show more.

Resource Id Arguments

`--ids` : One or more resource IDs (space-delimited). It should be a complete resource ID containing all information of 'Resource Id' arguments. You should provide either `--ids` or other 'Resource Id' arguments.

`--name` `--target-name` `-n` : Name of the target.
`--resource-group` `-g` : Name of resource group. You can configure the default group using ``az` configure `--defaults group=<name>``.
`--subscription` : Name or ID of subscription. You can configure the default subscription using ``az account set -s NAME_OR_ID``.

Global Arguments

`--debug` : Increase logging verbosity to show all debug logs.
`--help` `-h` : Show this help message and exit.
`--only-show-errors` : Only show errors, suppressing warnings.
`--output` `-o` : Output format. Allowed values: json, jsonc, none, table, tsv, yaml, yamlc. Default: json.
`--query` : JMESPath query string. See <http://jmespath.org/> for more information and examples.
`--verbose` : Increase logging verbosity. Use `--debug` for full debug logs.

Examples

Update a target
`az workload-orchestration target update -g {rg} -n {target_name} --description {description}`
`--display-name {display_name} --hierarchy-level {hierarchy_level} --solution-scope`

```
        {solution_scope} --state {state} --target-specification
{target_specification}
```

To search AI knowledge base for examples, use: az find "az workload-orchestration target update"

```
(.venv)
az workload-orchestration target update `
>> --resource-group $rg `
>> --name "$resourcePrefix-mk72" --debug

az workload-orchestration target update `
>> --resource-group $rg `
>> --name "$resourcePrefix-mk72" --help
This command is from the following extension: workload-orchestration

```

Command

az workload-orchestration target update : Update a Target Resource.

Arguments

--no-wait : Do not wait for the long-running operation to finish. Allowed values: 0, 1, f, false, n, no, t, true, y, yes.

Generic Update Arguments

--add : Add an object to a list of objects by specifying a path and key value pairs. Example: `--add property.listProperty <key=value, string or JSON string>`.
 --force-string : When using 'set' or 'add', preserve string literals instead of attempting to convert to JSON. Allowed values: 0, 1, f, false, n, no,

`--remove` : t, true, y, yes.
 : Remove a property or an element **from** a list.
 Example: `--remove`
`propertyToRemove``
`--set` : Update an object by specifying a property path
 and value to **set**.
 Example: `--set property1.property2=<value>``.

Properties Arguments

`--capabilities` : List of capabilities Support shorthand-syntax,
 json-file and yaml-
 file. **Try** `"?"` to show more.
`--description` : Description of target.
`--display-name` : Display name of target.
`--hierarchy-level` : Hierarchy Level.
`--solution-scope` : Scope of the target resource.
`--state` : State of resource. Allowed values: active,
 inactive.
`--target-specification` : Target spec Support shorthand-syntax, json-file
 and yaml-file. **Try**
`"?"` to show more.

Resource Arguments

`--tags` : Resource tags. Support shorthand-syntax, json-
 file and yaml-file. **Try**
`"?"` to show more.

Resource Id Arguments

`--ids` : One or more resource IDs (space-delimited). It
 should be a complete
 resource ID containing all information of
 'Resource Id' arguments. You
 should provide either `--ids` or other 'Resource
 Id' arguments.
`--name --target-name -n` : Name of the target.
`--resource-group -g` : Name of resource **group**. You can configure the
 default **group** using ``az`
`--subscription` : Name or ID of subscription. You can configure
 the default subscription
 using ``az account set -s NAME_OR_ID``.

Global Arguments

`--debug` : Increase logging verbosity to show all debug
 logs.

`--help -h` : Show this help message and `exit`.
`--only-show-errors` : Only show errors, suppressing warnings.
`--output -o` : Output format. Allowed values: json, jsonc, none, table, tsv, yaml, yamlc. Default: json.
`--query` : JMESPath query string. See <http://jmespath.org/> for more information and examples.
`--verbose` : Increase logging verbosity. Use `--debug` for full debug logs.

Examples

Update a target

```

az workload-orchestration target update -g {rg} -n {target_name} --
description {description}
--display-name {display_name} --hierarchy-level {hierarchy_level} --
solution-scope {solution_scope} --state {state} --target-specification
{target_specification}
  
```

To search AI knowledge base for examples, use: `az find "az workload-orchestration target update"`

(.venv)

```

az workload-orchestration target create `
>> --resource-group $rg `
>> --name "$resourcePrefix-mk72" --help
  
```

This command is from the following extension: workload-orchestration

Command

`az workload-orchestration target create` : Create a Target Resource.

Arguments

`--name --target-name -n` [Required] : Name of the target.
`--resource-group -g` [Required] : Name of resource group. You can configure the default group using ``az configure --defaults group=<name>``.
`--no-wait` : Do not wait for the long-running operation to finish.
Allowed values: 0, 1, f, false, n, no, t, true, y, yes.

Properties Arguments

`--context-id` [Required] : ArmId of Context.
`--description` [Required] : Description of target.

<code>--display-name</code>	[Required] : Display name of target.
<code>--hierarchy-level</code>	[Required] : Hierarchy Level.
<code>--target-specification</code>	[Required] : Specifies that we are using Helm charts for the k8s
<code>json-file</code> and <code>yaml-</code>	<code>deployment</code> Support shorthand-syntax, file. Try "??" to show more.
<code>--capabilities</code>	: List of capabilities Support
<code>shorthand-syntax</code> , <code>json-file</code>	and <code>yaml-file</code> . Try "??" to show more.
<code>--solution-scope</code>	: Defines the Kubernetes namespace that
the app will be	deployed to. If not supplied, it will
default to solution	template name.
<code>--state</code>	: State of resource. Allowed values:
active, inactive.	
Resource Arguments	
<code>--extended-location</code>	: Defines the custom location of the
AKS cluster Support	shorthand-syntax, <code>json-file</code> and <code>yaml-</code>
file. Try "??" to show	more.
<code>--location -l</code>	: The geo-location where the resource
lives When not	specified, the location of the
resource group will be used.	
<code>--tags</code>	: Resource tags. Support shorthand-
syntax, <code>json-file</code> and	<code>yaml-file</code> . Try "??" to show more.
Global Arguments	
<code>--debug</code>	: Increase logging verbosity to show
all debug logs.	
<code>--help -h</code>	: Show this help message and exit.
<code>--only-show-errors</code>	: Only show errors, suppressing
warnings.	
<code>--output -o</code>	: Output format. Allowed values: json,
<code>jsonc</code> , none, table,	tsv, yaml, yamlc. Default: json.
<code>--query</code>	: JMESPath query string. See
http://jmespath.org/ for more	information and examples.
<code>--subscription</code>	: Name or ID of subscription. You can
configure the default	

```

subscription using `az account set -s
NAME_OR_ID`.
--verbose : Increase logging verbosity. Use --
debug for full debug
logs.

```

Examples

Create a Target Resource

```

az workload-orchestration target create -g {rg} -n {target_name} --
location {location}
--capabilities {capabilities} --description {description} --display-
name {display_name}
--hierarchy-level {hierarchy_level} --solution-scope {solution_scope}
--state {state}
--target-specification {target_specification}

```

To search AI knowledge base for examples, use: `az find "az workload-orchestration target create"`

```

az workload-orchestration target update `
>> --resource-group $rg `
>> --name "$resourcePrefix-mk72" --help
This command is from the following extension: workload-orchestration

```

Command

az workload-orchestration target update : Update a Target Resource.

Arguments

--no-wait : Do not wait for the long-running operation to finish. Allowed values: 0, 1, f, false, n, no, t, true, y, yes.

Generic Update Arguments

--add : Add an object to a list of objects by specifying a path and key value pairs. Example: `--add property.listProperty <key=value, string or JSON string>`.

--force-string : When using 'set' or 'add', preserve string literals instead of attempting to convert to JSON. Allowed values: 0, 1, f, false, n, no, t, true, y, yes.

--remove : Remove a property or an element from a list. Example: `--remove property.list <indexToRemove>` OR `--remove propertyToRemove`.

--set : Update an object by specifying a property path and value to set. Example: `--set property1.property2=<value>`.

Properties Arguments

--capabilities : List of capabilities Support shorthand-syntax,

json-file and yaml-

file. Try "??" to show more.

--description : Description of target.

--display-name : Display name of target.

--hierarchy-level : Hierarchy Level.

--solution-scope : Scope of the target resource.

--state : State of resource. Allowed values: active, inactive.

--target-specification : Target spec Support shorthand-syntax, json-file and yaml-file. Try "??" to show more.

Resource Arguments

--tags : Resource tags. Support shorthand-syntax, json-file and yaml-file. Try "??" to show more.

Resource Id Arguments

--ids : One or more resource IDs (space-delimited). It should be a complete

resource ID containing all information of 'Resource Id' arguments. You should provide either --ids or other 'Resource Id' arguments.

--name --target-name -n : Name of the target.

--resource-group -g : Name of resource group. You can configure the default group using `az configure --defaults group=<name>`.

--subscription : Name or ID of subscription. You can configure the default subscription using `az account set -s NAME\_OR\_ID`.

Global Arguments

--debug : Increase logging verbosity to show all debug logs.

--help -h : Show this help message and exit.

--only-show-errors : Only show errors, suppressing warnings.

--output -o : Output format. Allowed values: json, jsonc, none, table, tsv, yaml,

yamlc. Default: json.

--query : JMESPath query string. See <http://jmespath.org/> for more information and examples.

--verbose : Increase logging verbosity. Use --debug for full debug logs.

Examples

Update a target

```
az workload-orchestration target update -g {rg} -n {target_name} --
description {description}
--display-name {display_name} --hierarchy-level {hierarchy_level} --
solution-scope
{solution_scope} --state {state} --target-specification
{target_specification}
```

To search AI knowledge base for examples, use: `az find "az workload-orchestration target update"`

```
