How to Project work .....	13

## Introduction

This proposed project is called Online Social Network Library System but our website domain name is read book. It's a combination of computer science and psychology. Its main intention is to indirectly ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.

Our main goal achievement was to use social networks to connect libraries . main reason for this many people don't give to anything free even their knowledge therefore we connect to social network with library releasing their dopamin using social network its also include library . advertisement is main income this source we watching behaviour of users and saw target advertisement this is free social network they didn't pay us therefore we must sell them (details, scope of them , like unlike how much time target post read by them like this \*\*\* ) we are not going further but actually this concept could build the most profitable site with which we can achieve our main goal . We build only basic architecture.

We give to people to create a profile and they can include interesting things and share notes and pdf to their profile. And they can also make notes and post to read to others. authors can make a page. authors can include their book with some pages in their pages. Autor book posts also create groups and post connect to the group. The reader can discuss the book author and members can reply.

Also, institutes & universities could release their research and note other readers can engage also anyone can advertise our profit some percentages we reserve to develop for quality education and promote lifelong learning opportunities for all. Our secondary goal is a world people familiarize themselves to read and write and share their knowledge. We can't do it directly because we use indirect concepts. Nowadays most people are addicted to social media and they waste their time. This time we used to read something and learn something. That's our main hope. We make passion among people learn something new and update their knowledge. Psychology coming with these concepts. People want to be famous among others. Therefore we make a social profile and others can share their posts with tap to emoji suddenly. People release dopamine they wanna write. upload notes, pdf. Share their knowledge.

Post

**J.R.R. Tolkien**

"But Sauron was not of mortal flesh, and though he was robbed now of that shape in which had wrought so great an evil, so that he could never again appear fair to the eyes of Men, yet his spirit arose out of the deep and passed as a shadow and a black wind over the sea, and came back to Middle-earth and to Mordor that was his home. There he took up again his great Ring in Barad-dur, and dwelt there, dark and silent, until he wrought himself a new guise, an image of malice and hatred made visible; and the Eye of Sauron the Terrible few could endure."

### CHANGE PROFILE PICTURE

Click on **change profile image** after then click **choose file** (only support jpeg) and **change** button

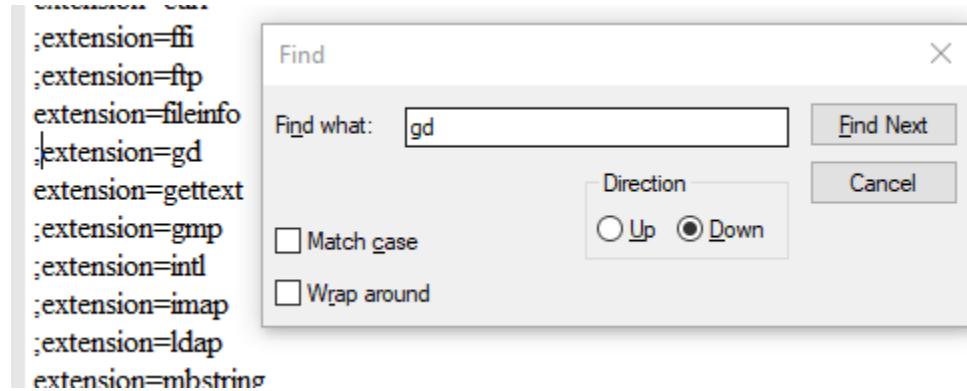

No file chosen

If you wanna change profile picture you must add **GD library** for php

Open xampp control panel apache click on config after then click PHP/php.ini)

CTRL+F input gd and find next

Clear ; mark in front of **;extension=gd** after save it **extension=gd**

**Extension gd ; mark clear**

extension=bz2
extension=curl
;extension=ffi
;extension=ftp
extension=fileinfo
extension=gd
extension=gettext
;extension=gmp
;extension=intl
;extension=imap
;extension=ldap
extension=mbstring

Save it and start server

## HOW TO PROJECT WORK

Open php my admin and create database its must name in readbook\_db . Create it

Clone Github repository your machine

Path :- C:\xampp\htdocs

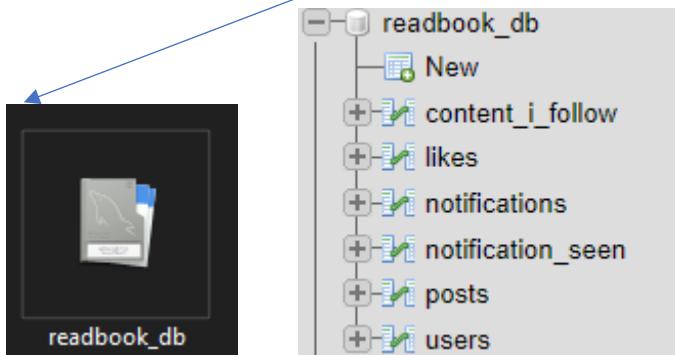

GitHub clone link :- [umaljayawardhana/readbook: learning development \(github.com\)](https://github.com/umaljayawardhana/readbook)

After clone complete open classes folder in readbook its has connect. Php file that's class use connect to database

```
class Database
{
    private $host = "localhost";
    private $username = "root";
    private $password = "";
    private $db = "mybook_db";
```

This is database name you must create

You cloned readbook folder has readbook\_db.sql file its import to we early created in php my admin , readbook\_db database

- ✚ Database must have these tables
- ✚ Now you can run project

## **Conclusion**

The project is based on a social network we can easily attract to people to read books(site domain). Next decades Definitely a world education system based on web platforms . This will help build knowledgeable people. Part of the profits go to poor countries in the third world develop to equitable quality education
