

Getting Started

Welcome to AFFiNE!

You can start with a `normal` page, with richly `formatted` text, *markdown support*, [links](#), and a lot of ~~other blocks~~.

Examples for advanced blocks

- For example, Latex math. To explore more, type

 - To solve the equation $x^2 - 1 = 1$, follow these steps:
 - I. Start by simplifying the equation:

$$x^2 - 1 = 1$$

- II. Add 1 to both sides to isolate the x^2 term:

$$x^2 = 2$$

- III. Take the square root of both sides to solve for x :

$$x = \pm \sqrt{2}$$

Therefore, the solutions to the equation are $x = \sqrt{2}$ and $x = -\sqrt{2}$.
