Summary

Dynamic Front-end Web Developer with 3+ years of experience in
crafting user-centric web interfaces that enhance client engagement
and satisfaction. Specializing in JavaScript, Typescript, and Next.js,
a strong foundation in modern web technologies is leveraged to
create responsive and interactive web applications. A collaborative
problem-solver, dedicated to delivering high-quality projects that
align with client visions. Committed to continuous learning and
innovation, striving to make a meaningful impact in the digital
landscape through cutting-edge solutions.

Experience

Qavdev Limited
Frontend Developer
January 2026 - Present (1 month)
Lagos State, Nigeria

Saviez Tech
Frontend Web Developer
November 2024 - Present (1 year 3 months)
Owerri, Imo State, Nigeria

CTO & Frontend Developer at Saviez

At SaviezTech, we build software that puts people first.....clear, practical tools
that make work easier and more effective.

As CTO and lead frontend developer, I set the technical direction and work
directly on the code that powers our products. My day-to-day responsibilities
include:

- Guiding product development from concept to launch, making sure every
feature solves a real user problem and supports our business goals.

- Building and maintaining client applications with a focus on speed, reliability, and smooth user experience across devices.
- Leading frontend contract projects, delivering clean, responsive interfaces for clients in healthcare, education, finance, and more.
- Introducing modern tools and practices, like TypeScript, SvelteKit, and component-driven design.....to keep our codebase maintainable and our apps fast.

I've helped grow SaviezTech into a trusted partner for organizations that want software that's not just functional, but truly useful. My goal is simple: ship code that works well today and scales easily tomorrow.

Theraswift Health Firm
Frontend Web Developer
June 2024 - Present (1 year 8 months)
Lagos State, Nigeria

I modernize outdated websites and build advanced, user-focused features for a next-generation healthcare system.
My first major project was developing the Provider Portal (Doctors App) .... a secure, responsive web application where physicians can:

Sign up and complete multi-step verification (license, credentials, identity)
Prescribe medications with real-time drug interaction checks and e-signatures
Chat securely with patients via encrypted, HIPAA-compliant messaging
View real-time patient updates — vitals, lab results, appointment history
Manage shared access for multiple doctors under the same provider group (clinics, hospitals, or networks)

I rebuilt legacy UI components into a clean, intuitive interface using React + TypeScript, improved performance by 70%, and ensured full mobile responsiveness for on-call doctors.
Currently leading frontend architecture for the full healthcare ecosystem, integrating complex workflows while keeping the experience simple and reliable for medical professionals.
