What is Slidev?

Slidev is a slides maker and presenter designed for developers, consist of the following features

- Text-based - focus on the content with Markdown, and then style them later
- Themable - themes can be shared and re-used as npm packages
- Developer Friendly - code highlighting, live coding with autocompletion
- Interactive - embed Vue components to enhance your expressions
- Recording - built-in recording and camera view
- Portable - export to PDF, PPTX, PNGs, or even a hostable SPA
- Hackable - virtually anything that's possible on a webpage is possible in Slidev

4

Table of contents

You can use the `Table of contents` component to generate a table of contents for your slides:

```
<Table of contents />
```

The title will be inferred from your slide content, or you can override it with `title` and `level` in your frontmatter.

5

Code

Use code snippets and get the highlighting directly, and even types hover!

```
ts filename-example.ts
// TypeScript enables TypeScript hover information
// and errors in markdown code blocks
// More at https://shiki.style/packages/twoslash
import { computed, ref } from 'vue'

const count = ref(0)
```

Notes can also sync with clicks

1 This will be highlighted after the first click

2 Highlighted with `count = ref(0)`

5 Last click (skip two clicks)

29 words

```
const doubled = computed(() => count.value * 2)
doubled.value = 2
Cannot assign to 'value' because it is a read-only
```

6

Shiki Magic Move

Powered by [shiki-magic-move](#), Sliddev supports animations across multiple code snippets.

Add multiple code blocks and wrap them with `<code><magic-move</code>` (four backticks) to enable the magic move. For example:

```
1 <!-- step 4 -->
2 <script setup>
3   const author = {
4     name: 'John Doe',
5     books: [
6       'Vue 2 - Advanced Guide',
7       'Vue 3 - Basic Guide',
8       'Vue 4 - The Mystery',
9     ]
10  }
11 </script>
```

No notes for this slide

7

Components

You can use Vue components directly inside your slides.

We have provided a few built-in components like `<tweet/>` and `<youtube/>` that you can use directly. And adding your custom components is also super easy.

```
<Counter :count="10" />
```

Check out [the guides](#) for more.

Presenter note with **bold**, *italic*, and ~~striked~~ text.

Also, HTML elements are valid:

Left content

29 words

Right content

8

Themes

Sliddev comes with powerful theming support. Themes can provide styles, layouts, components, or even configurations for tools. Switching between themes by just one edit in your frontmatter:

Read more about [How to use a theme](#) and check out the [Awesome Themes Gallery](#).

9

Clicks Animations

You can add `v-click` to elements to add a click animation.

This shows up when you click the slide:

```
<div v-click>This shows up when you click the slide.</div>
```

The `v-mark` directive also allows you to add **inline marks**, powered by [Rough Notation](#):

```
<span v-mark underline orange>inline markers</span>
```

10

Motions

Motion animations are powered by [@vueuse/motion](#), triggered by `v-motion` directive.

```
<div
  v-motion
  :initial="{ x: 50 }"
  :animate="{ x: 0 }"
  :click-3="{ x: 50 }"
  :leave="{ x: 100 }"
>
  Sliddev
</div>
```

11

L^AT_EX

L^AT_EX is supported out-of-box. Powered by K^AT_EX.

Inline $\sqrt{3x-1} + (1+x)^2$

Block

$$\begin{aligned}\nabla \cdot \vec{E} &= \frac{\rho}{\epsilon_0} \\ \nabla \cdot \vec{B} &= 0 \\ \nabla \times \vec{E} &= -\frac{\partial \vec{B}}{\partial t} \\ \nabla \times \vec{B} &= \mu_0 \vec{J} + \mu_0 \epsilon_0 \frac{\partial \vec{E}}{\partial t}\end{aligned}$$

13

Draggable Elements

Double-click on the draggable elements to edit their positions.

Double-click me!

DIRECTIVE USAGE

```

```

COMPONENT USAGE

```
<v-drag type="3d">
  <div class="i-carbon:arrow-up" />
  Use the v-drag component to have a draggable container!
</v-drag>
```

DRAGGABLE ARROW

```
<v-drag-arrow two-way />
```

No notes for this slide

14

Imported Slides

You can split your slides.md into multiple files and organize them as you want using the `src` attribute.

slides.md

```
# Page 1
Page 2 from main entry.
---
# src: ./subpage.md
```

subpage.md

```
# Page 2
Page 2 from another file.
```

15

Monaco Editor

Slidev provides built-in Monaco Editor support.

Add `{monaco}` to the code block to turn it into an editor:

```
import { ref } from 'vue'
import { emptyArray } from '@vueuse/core'
const arr = ref(emptyArray(10))
```

Use `{monaco-run}` to create an editor that can execute the code directly in the slide:

```
import { version } from 'vue'
import { emptyArray, sayHello } from '@vueuse/core'
sayHello()
console.log(use {monaco})
console.log(emptyArray(10).reduce((fib, i) => [...fib, fib.at(-1) + fib.at(-2)], [1, 1]))
```

Code is disabled in the 'overview' mode
