

Would be nice if siunitx `\ang` would parse uncertainties the same way as `\qty`

Reference output: $(17.8 \pm 0.3)^\circ$ `\qty{17.8(3)}{\degree}`

siunitx output: 17.8° `\ang{17.8(3)}`

(Running MiKTeX, most recent versions of all packages as of May 27th, 2026.)
